DCU

Date of Submission 27 February 2026

Introduction

Every day, millions of cyclists navigate busy city streets with their phones strapped to handlebars, coupled with ear buds to block out traffic noises. The result is a rider who is simultaneously trying to move through a complex urban environment while managing a screen, a route, and the road. A dangerous and exhausting combination. We identified this friction as a fundamental and largely unsolved problem in urban mobility.

Existing solutions, whether audio navigation, phone mounts, or traditional cycling computers, all require the rider to divide their attention rather than eliminate the distraction entirely. RideAware was created to solve this. Our purpose is to unlock the "flow state" for every rider by removing the friction of stressful navigation. We believe that when technology disappears into the background, the journey takes center stage. We chose to build this brand because the technology, market, and the cultural moment are aligned. AR eyewear is the fastest-growing segment of a $149B global eyewear market (Paskeh et al., 2025), urban cycling is accelerating across European cities, and riders are actively seeking smarter, safer alternatives to phone-based navigation. RideAware is not a response to a trend, it is the brand that defines one.

Purpose

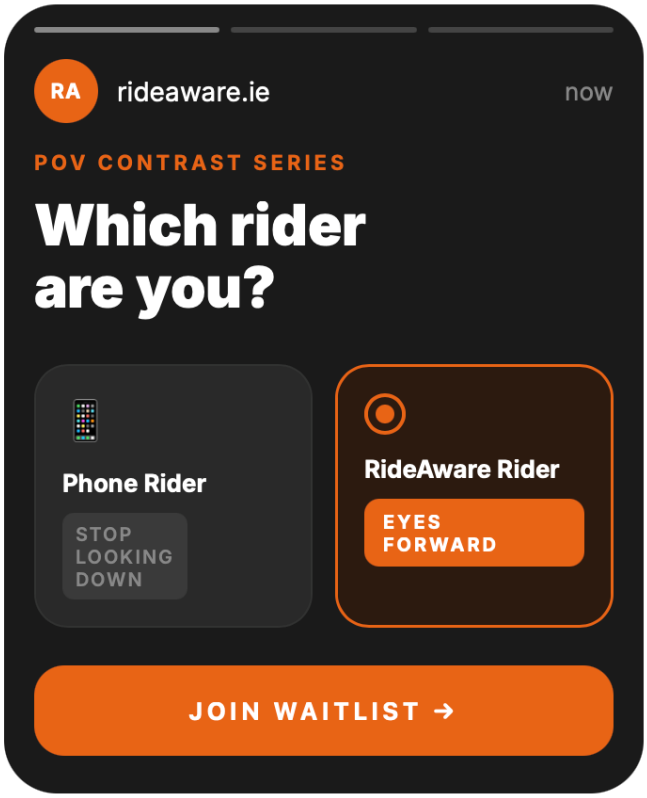
To unlock the "Flow State" for every rider by removing the friction of stressful navigation.

Vision

To become the global standard for the augmented cycling experience, where technology disappears so the journey can take center stage.

Mission

To empower the global riding community with intuitive, real-time intelligence.



The Brand

Brand Positioning

RideAware is more than just a technological accessory; it is a “Visionary Guardian” for the modern cyclist. Our brand tone is deliberately minimalist, confident and forward-looking. We communicate clearly and concisely to reduce cognitive load for our users, just as our product does on the road.

The brand we intend to build

RideAware is positioned as a smart-mobility brand that empowers cyclists through intuitive, distraction-free navigation. RideAware is built on three core pillars:

01 **Clear, Distraction-Free Navigation**

AR cues directly in the rider’s field of view and wind protection

02 **Multifunctional Design**

Combines navigation, sun protection

03 **Affordable Smart Glasses**

Accessible pricing and intuitive interface, easy to use for every age.

The following manifesto forms the foundation of our brand identity and guides all marketing initiatives for 2026-2027:

‘Today's city is loud and full of distractions. We don't believe in slowing down, we believe in seeing better. We replace risk with focus, and distraction with clarity.

RideAware. See Beyond.

(See Appendix for full visuals).

BRAND MANIFESTO

"Today's city is loud. We don't slow down — We SEE BEYOND."

RideAware replaces friction with flow and distraction with clarity. Technology disappears so the journey can take centre stage.

01 Clear, Distraction-Free Navigation

02 Multifunctional Design

03 Affordable Smart Glasses

Brand Positioning Statement

"The Better Alternative to Phone-Based Navigation."

Initiative 1: Brand Awareness

Overview

The "Heads-Up" campaign is designed to establish RideAware not just as a gadget, but as an essential tool for the Irish cycling ecosystem. Our strategy is Organic-Led, Paid-Amplified to keep costs low while ensuring results. The organic-led, paid-amplified approach is grounded in evidence that TikTok's algorithm provides significantly higher organic reach than traditional platforms, allowing new brands to achieve visibility without large existing followings (Dhillon, 2023, cited in Lugo, 2023).

Strategic Objectives & VDP Alignment

The brand awareness campaign will address "The Cost of a Glance" - the cognitive load where downward glances at phones lead to stress, dangerous situations and lost efficiency.

Key Messaging Pillars are "Master the Maze" (direct CTA for stressful environments), "Reclaim your focus" (positioning efficiency), and "Be there hassle free".

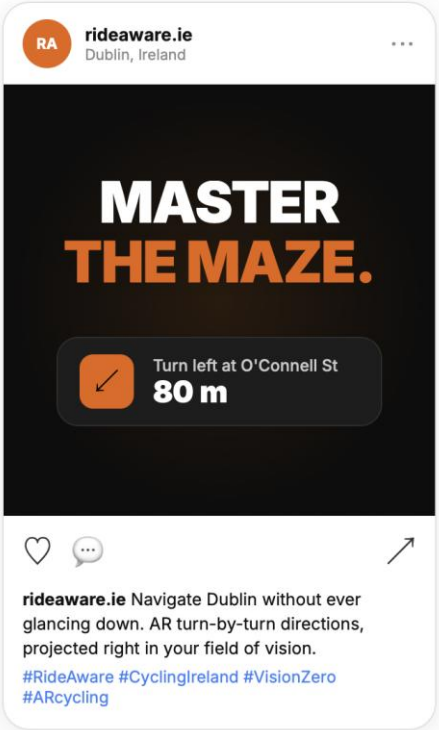
Implementation & Mechanics

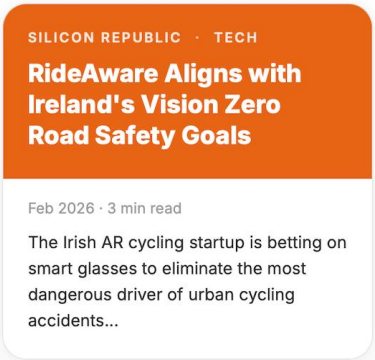
High-Impact Visual Content to reach new customers and build interest will be the "POV Contrast" series on Instagram & TikTok, comparing the "Phone Rider" vs. the "RideAware Rider." Moreover, influencer & community building will be key. For example, The "Commute Challenge" where 5-7 key Irish cycling influencers will document their first week switching from phone-mounts to RideAware.

Another goal will be to pitch the "Vision Zero" alignment to *The Irish Times (Tech)* and *Silicon Republic*.

Target Persona

The initiative addresses urban cyclists in Dublin/Cork interested in cycling, tech, and safety gadgets. Also, commuters looking to reduce cognitive load and navigate complex city intersections safely.





Measures of Success in 2026/2027

- **Reach:** Generate 500,000+ Impressions.
- **Engagement:** Achieve a 5% Click-Through Rate (CTR).
- **Conversion:** Secure 500 pre sign ups

Initiative 2: Valuable Partnerships

Overview
RideAware's partnership strategy focuses on embedding the product into two existing infrastructures that urban commuters already rely on, Ireland's Cycle to Work scheme and established cycling navigation platforms, removing friction from both the purchase and the riding experience.

Strategic Objectives & VDP Alignment
Position the brand as the professional standard for urban commuters. Transition the perception of the glasses into a tool for speed, efficiency, comfort, flow and safety.

Implementation & Mechanics
RideAware will register as an approved supplier under Ireland's Cycle to Work tax incentive scheme, enabling employees at Dublin-based companies to purchase the glasses at a subsidised rate through their employer. This removes price as a key barrier for the daily urban commuter while positioning RideAware as a workplace wellness product rather than a consumer gadget. Employer uptake is realistic given that companies already cite the scheme as easy to administer, cost-effective, and aligned with health and sustainability commitments (Revenue, 2025).

Alongside this, Rideaware will aim for a technical integration with Strava and Komoot. Therefore, enabling One-Tap Casting: riders plan their route as they already do, tap once, and directions are cast directly to the AR HUD. With Strava, reaching 120 million registered users in 2023 and growing by two million per month (Business of Apps, 2025), this integration immediately places RideAware inside the daily habits of a large and highly engaged cycling audience.

Target Persona
This initiative targets two overlapping profiles. The first is the daily urban commuter, a professional aged 25-40, working in Dublin's tech or finance sector, already cycling to work or considering it, motivated by efficiency, safety, and reducing cognitive load. The second is the tech-savvy recreational rider who uses Strava or Komoot regularly, is comfortable with connected devices, and values seamless integration over learning new tools.

Measures of Success in 2026/2027

Scheme registration: RideAware approved as a Cycle to Work supplier by Q2 2026

Employer reach: 1–3 Dublin-based companies actively promoting RideAware through the scheme by Q4 2026

App integration: Strava and Komoot integration live by Q1 2027

Initiative 3: Pop-Up Demo Campaign

Overview

To accelerate acceptance of an unfamiliar AR navigation product, RideAware will introduce mobile "Safety First Experience Labs" in major European cycling cities, where potential users can try the product in a controlled, risk-free environment. Early-stage expo presence will be secured through retail or media partnerships, with guerrilla sampling as a cost-effective alternative where official exhibition is not yet feasible.

Strategic Objectives & VDP Alignment

Since AR navigation is inherently difficult to communicate through traditional advertising alone, this initiative targets the consideration phase of the customer journey. By enabling users to physically experience the product, RideAware translates abstract benefits into tangible proof, breaking down psychological barriers and reinforcing its positioning as a practical solution rather than a complex wearable.

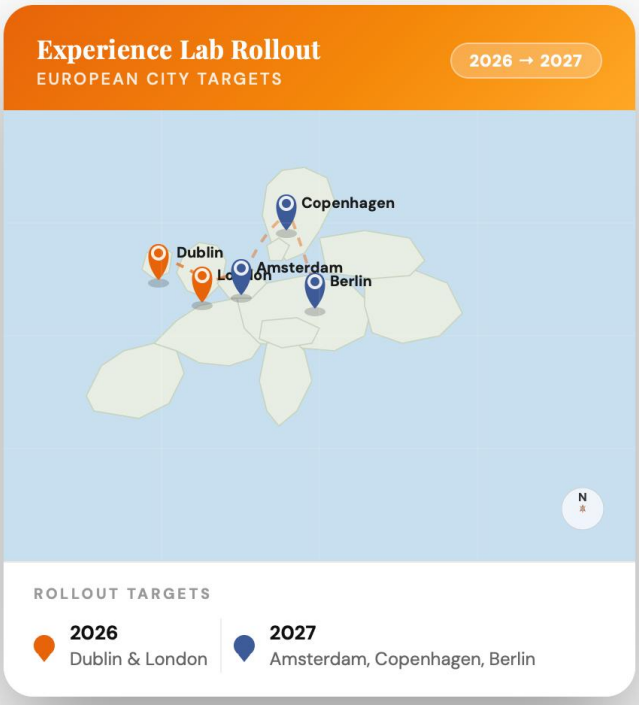
Implementation & Mechanics

Potential customers will test the RideAware glasses on stationary smart bikes using AR simulators. In 2026, the focus is on cycling and technology trade fairs targeting early adopters. In 2027, the initiative will expand to train stations, business districts, and university campuses.

Following each demo, participants will receive a QR code with an exclusive early-adopter discount, creating a direct conversion pathway from trial to purchase.

Target Persona

This initiative addresses tech-savvy urbanites and safety-conscious commuters who value reliability and want technology that promotes concentration rather than distraction. The hands-on experience reduces the perceived technological barrier and builds trust in the brand.



Measures of Success in 2026/2027

- **Participation rate:** Achieve at least 500 test drives per event location
- **Lead generation:** Convert 10% of testers into newsletter subscribers or pre-order customers on site
- **Brand sentiment:** Administer a five-question post-test survey per location; the goal is an 80% positive rating for user-friendliness

Initiative 4: Micro-Influencer Campaign

Overview
RideAware will launch "The Visionary Pilot", a micro-influencer campaign in which curated creators across TikTok, YouTube, and Instagram will document their "Unbox to Commute" journey across four tiers, from Mega to Micro, balancing maximum reach with community-level authenticity.

Strategic Objectives & VDP Alignment
Initiative 4 deepens the credibility built by Initiative 1 through authentic commuters demonstrating real-life practicality. As Kumari (2025) notes, 63% of consumers trust influencer recommendations over brand advertising, reinforcing RideAware's focus on everyday commuter creators.

Implementation & Mechanics
Influencers create POV videos contrasting phone-checking with AR-guided navigation. Each tier serves a distinct role in the credibility journey, with budgets scaled accordingly.

Target Persona
Targeting urban commuters aged 20-40, Urban Icons and Tech Testers build aspirational appeal and technical trust, while Daily Pilots and Real Traffic Proof Riders convert sceptical safety seekers through everyday proof.

Tier	Category	Example Creator	Budget Tier	Primary Role
Urban Icons	Lifestyle & Tech (Mega)	Casey Neistat	€5,000+	Drive maximum brand awareness and position RideAware as a must-have smart city gadget.
Tech Testers	Cycling & Wearable Tech (Macro)	DC Rainmaker	€1,000-5,000	Build technical credibility through wearable tech reviews covering AR navigation, battery life, and app integrations.
Daily Pilots	Urban Commuters (Micro)	Lauradoessports	€500-1,000	Provide authentic daily-use scenarios in Dublin/UK cities, highlighting performance in rain, traffic, and low-light conditions.
Real Traffic Proof Riders	Bike Courier / Delivery Riders (Micro)	BikingDC	Gifted product	Deliver street-level product proof through POV footage in live city traffic, showcasing efficiency in real-world conditions.

Measures of Success in 2026/2027

- **Engagement rate:** Achieve an interaction rate of 4-6% for influencer posts
- **Reach:** Generate 500,000 impressions in the specific commuter niche
- **Content volume:** Produce a minimum of 40 original pieces of content across all tiers, generating reusable brand assets beyond the campaign period

Initiative 5: Gamified Loyalty App

Overview

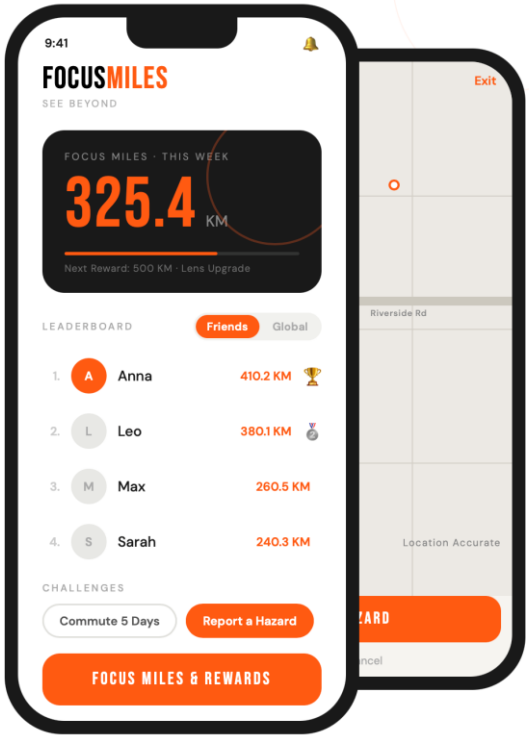
RideAware will launch a companion app that transforms everyday riding into a rewarding experience. Users earn "Focus Miles" for kilometres ridden using AR navigation, unlocking rewards such as lens upgrades or discounts on future models.

Target Persona

Gamification and leaderboards appeal to performance cyclists and early adopters, while the hazard reporting feature creates a sense of community ownership that resonates with everyday commuters and safety-conscious riders alike.

Strategic Objectives & VDP Alignment

This initiative shifts RideAware from a one-time hardware purchase to a recurring, data-driven relationship with its riders, increasing customer lifetime value and opening new revenue streams through B2B partnerships. Grounded in Deterding's (2011) gamification framework, 'Focus Miles' rewards promotes long-term engagement and brand loyalty.



Implementation & Mechanics

The app will reward consistent, focused commuting through a gamified loyalty loop. From 2027, a "Hazard Reporting" feature allows riders to mark dangerous locations appearing in real time on other users' HUDs.

Phase	Feature	Launch Date	Expected Impact
Beta	Focus Miles Tracking	Q2 2026	Higher user retention through gamified rewards for distraction-free riding.
V1.5	Social Leaderboards	Q4 2026	Increased engagement and organic brand advocacy through peer competition.
V2.0	Hazard Reporting	Q1 2027	Improved community safety via crowdsourced real-time hazard alerts in the HUD.
V3.0	B2B Integration	Q3 2027	Monetisation opportunities through partnerships with insurers and urban mobility stakeholders.

Measures of Success in 2026/2027

Retention Rate: Achieve a 60-day retention rate of at least 55% of app users, demonstrating sustained engagement beyond the initial onboarding phase.

Community growth: Record at least 5,000 reported road hazards across Dublin, London, and DACH pilot cities in the first year after the feature is introduced.

Upsell rate: Achieve a 10% conversion rate for accessories or successor models through in-app offers, targeting 500+ users by end of 2026.

- **Hazard Reporting Live** Q1 2027
- **B2B Integration Launch** Q3 2027

RideAware©

Conclusion

RideAware enters the market at precisely the right moment. This strategy, spanning five complementary initiatives from the "Heads-Up" awareness campaign to the "See Beyond" loyalty ecosystem, builds momentum organically while amplifying results through targeted paid activity and strategic partnerships. Ireland provides the proof-of-concept launch market, with DACH expansion to follow. Clear KPIs across awareness, conversion, retention, and growth ensure accountability at every stage. RideAware is not just entering a product category, it is defining a new standard for cycling navigation. Eyes forward. See Beyond.

BEFORE

The Phone Rider

- ✕ Glancing down at every turn
- ✕ Distracted by notifications
- ✕ Stressed in busy traffic
- ✕ Dangerous phone mounting

→

WITH RIDEAWARE

The Focused Rider

- ✓ Eyes forward at all times
- ✓ AR directions in field of vision
- ✓ Smoother, stress-free commute
- ✓ Confident urban mobility

RideAware Visuals Link

Appendix - Value Design Proposition

Customer Jobs

- Use lightweight, comfortable, easy-to-handle tech
- Integrate with existing apps (Komoot, Strava, Maps, Garmin)
- Find efficient routes in urban and mixed environments
- Follow clear, reliable, real-time directions
- Avoid stopping to check a phone or bike computer
- Reduce stress in traffic and unfamiliar areas
- Keep eyes on the road at all times
- Feel confident and relaxed while riding
- Signal sustainable and responsible mobility behaviour
- Ensure long battery life and stable connectivity
- Present themselves as sporty, modern, and tech-savvy
- Navigate safely without looking down

Gains

- More confident, enjoyable, stress-free rides
- Lightweight, comfortable, ergonomic design
- Unobstructed vision with minimal distraction
- Higher safety and situational awareness
- Fewer accessories needed (all-in-one solution)
- Seamless app and device integration
- Clear AR navigation in the line of sight

Pains

- Distraction from phones or bike computers
- Missed turns and unsafe situations
- Poor visibility (rain, glare, low light)
- Short battery life and unreliable performance
- Unclear or inconsistent cycling infrastructure
- Devices are bulky, complex, or expensive
- Audio-only navigation hard to hear

Products & Services

- Bone-conduction audio for safe, ears-open guidance
- Weather-resistant hardware for rain, wind, and cold
- AR cycling glasses with real-time turn-by-turn navigation
- Photochromic, wind- and sun-protective lenses
- Lightweight, ergonomic design for commuting & sport
- App integration with reliable routing and familiar navigation tools
- Visual cues projected into the rider's line of sight

Gain Creators

- Removes need for unsafe phone-based navigation
- Ensures audible cues even in noisy traffic (bone conduction)
- Replaces multiple accessories (sunglasses, navigation device)
- Provides clear, distraction-free guidance in the field of view
- Offers a simpler, more affordable alternative to complex AR glasses
- Improves visibility and usability in rain, glare, and low light
- Reduces technological burden through easy setup and familiar app integration

Pain Relievers

- Simple, intuitive interface increases user confidence and adoption
- Combines navigation + sun protection + wind protection in one device
- Affordable, accessible smart-glasses option for everyday cyclists
- All-weather usability increases comfort and ride consistency
- Enhances rider confidence through eyes-forward navigation
- Lightweight, ergonomic design supports long-distance comfort
- Reduces mental load and supports smoother, safer riding
