1 | Executive Summary

1.1 Introduction

Revolut operates as one of the world's leading Fintech companies in a highly competitive emerging industry. Their strategy is based on focused differentiation, allowing the company to stay lean and promote innovation, and its digital-only model enables it to pivot to market trends and changes quickly. Competing on user experience, Revolut seeks to differentiate itself from competitors by offering an easy-to-use app with a wider range of financial offerings.

1.2 Macro Environment Analysis

Revolut's growth has been rapid, recently surpassing 52.5 million users (Revolut Ltd, 2024b). However, the company's rapid growth has exposed it to both internal and external issues. Regulatory hurdles restrict how they can operate, while increasing customer complaints and cybersecurity concerns threaten their customer retention and brand loyalty.

1.3 Recommendation

These customer satisfaction pitfalls threaten Revolut's current customer retention and long-term profitability. Additionally, low customer trust undermines the company's long-term goal of competing with traditional banks in the lending space. This report proposes a strategy centred on increased investment in customer satisfaction teams that ensure customer complaints are handled effectively and on time. This will increase customer retention, which, in turn, will improve long-term brand trust and better position Revolut to compete against other neo and institutional banks. To implement the proposed strategy, Revout will use a five-year timeframe with KPIs and benchmarks at the one and three-year marks.

1.4 Implementation Plan

Within one year, introduce 24/7 human support with trained agents while limiting AI chatbot assistants to basic-level queries. By year three, establish specialised support hubs for teams proficient in specific issues, such as fraud or account freezes. By year five, to position Revolut as a financial institution that can compete with traditional banks, the recommendation outlines advertising its improved customer service to attract more customers and releasing reports detailing Revolut's customer service metrics.

1.5 Final Points

This recommendation, while at odds with Revolut's core business model of lean fintech operations, allows it to improve consumer loyalty and trust, which could have a significant impact on how safe customers feel when using Revolut as their primary bank.

2 | Introduction

Currently, consumers rely heavily on fast-paced, technology-focused solutions to everyday problems. Therefore, companies that cater to convenience and ease of use while leveraging cutting-edge technology are bound for success. At the centre is Revolut, a globally recognised fintech leader. The world has witnessed Revolut take shape, now valued at $75 billion according to recent data (Makortoff, 2025).

While Revolut has had success in global markets, this report aims to identify existing weaknesses in its current strategic approach and provide thoughtful solutions to ensure its future success. The following offers in-depth analyses of Revolut's current business model, key issues, and proposed recommendations.

3 | Orientation Stage

3.1 Company Overview

Revolut, a leading UK-based fintech company, was founded in 2015 by Nikolay Storonsky and Vlad Yatsenko (Revolut Ltd, 2024a). The company launched as a low-cost currency exchange start-up and multi-currency card service. Over time, it evolved into one of the world's largest digital financial platforms. Revolut now offers a wide range of banking, investment, and payment services through its mobile application.

3.2 Mission and Vision

Revolut's mission is to build a single financial platform that enables individuals and businesses to manage all aspects of their finances seamlessly through one app. Its vision is to become the world's leading financial super app, integrating banking, payments, investments, and lifestyle services into a unified digital experience (Revolut Ltd, 2024a; Revolut Ltd, 2024b).

3.3 Revolut's Value Capture Model

Revolut captures value through multiple revenue streams aligned with its digital platform model, including subscription plans, transaction fees, trading services, business accounts, and growing interest income (*Appendix A*). These revenue streams create a flexible model that enables Revolut to scale its customer base while deepening engagement across financial and lifestyle services, all within its app (Revolut Ltd, 2025b).

3.4 Revolut's Strategic Thinking Framework

Building on the value-capture mechanisms above and Loonam's (2022) strategic thinking framework, Revolut is positioned within the "outside-in" and "emergent" category (*Appendix B*). The company prioritises innovation and new ventures, such as creating an instant currency exchange, and focuses on creating value by testing new features and scaling

them to gain traction. Through these services, Revolut leverages Blue Ocean Strategy to identify unmet customer needs and generate new demand in underserved markets (source for Blue Ocean Strategy).

3.5 Preliminary Literature Review

In recent years, the fintech sector has expanded quickly due to innovation, customer-centred design, and internet accessibility. Organisations such as Revolut, Monzo, and Wise have upended traditional banking with mobile-first solutions that emphasise cost-effectiveness, transparency, and user experience (Al-Harbi, 2025). For instance, Revolut's smooth wireless transfers, real-time spending analytics, and quick currency exchange at interbank rates attract tech-savvy customers seeking control and convenience (Polasik, Wedawski & Lis, 2021). By lowering fees and providing simple account access, fintechs facilitate financial integration, which is why younger generations and technologically proficient individuals find them particularly appealing (Al-Harbi, 2025). Furthermore, fintechs can now innovate even further thanks to regulatory frameworks such as the EU's PSD2 and open banking initiatives, which facilitate integration with various financial platforms and promote competition in a previously closed sector (Stiefmueller, 2020).

Fintechs like Revolut are transforming the financial environment through partnerships and specialisation rather than eradicating established banks. In areas requiring complex credit services, deposit insurance, and regulatory compliance, traditional banks continue to dominate, despite Revolut's substantial market share in payments, trading, and personal finance management (Murinde, Rizopoulos & Zachariadis, 2022). Fintechs are increasingly collaborating with traditional banks to provide back-end infrastructure and licenses while concentrating on front-end innovation (Murinde, Rizopoulos & Zachariadis, 2022). This mutually beneficial relationship has fintechs serve as flexible innovators that expand rather than replace traditional banks, which offer stability and confidence. Consumers now see fintechs as crucial for speed and customisation, creating a hybrid financial ecosystem.

In the future, Revolut and the fintech industry are moving toward more intelligent, regulated, and connected financial environments (Polasik, Wedawski and Lis, 2021). Personalised financial planning, credit evaluation, and fraud detection will increasingly depend on artificial intelligence (Saiyed, 2025), as demonstrated by Revolut's implementation of AI-based risk monitoring. The industry's shift toward complete digital ecosystems is exemplified through the rise of "super apps" that include banking, investing, insurance, and travel services (Chemmanur *et al.*, 2020). Future expansion, however, will be shaped by more stringent regulation and regulatory scrutiny (Saiyed, 2025). Additionally, to balance

innovation with environmental responsibility, fintech companies are being encouraged by sustainability trends to implement features (Saiyed, 2025), such as Revolut's carbon tracking function.

3.6 Revolut's Industry Key Issues

Revolut faces several key structural challenges. The company continues to encounter major regulatory and compliance hurdles, including delays in obtaining its UK banking licence and heightened scrutiny from the Financial Conduct Authority (RTÉ News, 2025). Operating across multiple jurisdictions adds complexity and raises compliance costs, slowing product development (Digital Banking Maturity, 2024). Strengthening risk management and governance frameworks is essential but requires substantial investment and focus.

Additionally, Revolut's reputation has been challenged by past customer service issues and regulatory scrutiny. For a digital-only bank, trust is especially fragile, as customers cannot visit a branch if problems arise. Being fully digital makes Revolut a prime target for hackers and fraudsters; any breach, downtime, or security lapse could severely damage customer confidence and the brand's reputation (Najaf, Mostafiz and Najaf, 2021). Maintaining robust cybersecurity measures and transparent communication is critical to preserve user trust and loyalty.

Revolut's users expect seamless app performance, innovative features, and increasingly sustainable and ethical financial products. To retain loyalty, Revolut must continuously innovate, address evolving customer needs, and demonstrate responsibility in both security and ethical banking practices.

4 | Diagnostic Stage

4.1 Macro-Environment Analysis

In terms of macro-environmental scope, a focus on the EU-UK market focus was adopted due to the strategic relevance of these regions to Revolut. The Digital Operation Resilience Act (DORA) within the EU is a newly passed digital safety regulation (O'Neill, 2024). This poses a moderate threat to Revolut, as it may signal short-term adjustment hurdles as the company works towards compliance with this new regulatory framework.

In the economic landscape, Revolut should continue to focus on increasing its share of fee-paying customers as the ECB projects falling inflation in the upcoming years (ECB, 2025). While this is positive news for citizens, it can tighten the neobank's deposit margins.

The societal trends point to a rise in neo-banking adoption across the EU, with a projected CAGR of 16.9% from 2025 to 2033 (Thompsett, 2025). To leverage this, Revolut should maintain focused differentiation alongside growth initiatives.

On the technological front, Revolut should allocate a large portion of its R&D funding to cybersecurity, with integrated machine learning and Gen AI. Industry research predicts these disruptive technologies will enhance pattern recognition, creating opportunities to improve data security and fraud detection (Thompset, 2024).

ESG in finance is gaining relevance amongst consumers and investors within the EU. To remain competitive, Revolut must demonstrate its commitment to sustainability through green initiatives, green financing, or ESG projects. However, this must be done prudently as allegations of greenwashing can negatively impact the company's reputation.

Fintechs and neobanks operate in an evolving legal environment. Updates to the PSD3/PSR laws mean that Revolut will have to prepare for increased compliance costs to meet these new regulatory expectations. Additionally, the recently passed MiCA laws add complexity to the sale of crypto instruments (Dwyer, 2025). Since Revolut has recently been granted authorisation to sell crypto under this new framework, it will need to put in place the necessary internal controls to maintain a positive reputation among EU regulators (Psara, 2025). (See *Appendix C* for further details)

4.2 Industry Analysis

To evaluate the industry landscape for Revolut, Porter's Five Forces framework was used to assess the competitive intensity and structural attractiveness across rivalry, supplier power, buyer power, and threats of new entrants and substitutes.

To begin, competitive rivalry is high. Revolut must consider the strategic advantages that differentiate its service offerings from competitors. Hence, competition centres on pricing, user experience, and product range.

The suppliers' bargaining power is high. It is in the firm's best interest to maintain a strong relationship with suppliers, given the lack of choice (i.e., supplier diversification is infeasible).

The bargaining power of buyers is high. The firm needs to retain clients through qualitative factors, such as providing a superior user experience and maintaining consistency in overall client satisfaction.

The threat of new entrants is moderate. Entry requires fast, reliable and scalable infrastructure, such as cloud systems, often requiring a significant capital investment (Thefintechmap.com, 2024). While this creates a barrier for startups, established firms have the advantage of an existing customer base and revenue streams. This can be leveraged to scale rapidly and integrate financial services into existing products and services (The World Bank, 2022).

The threat of substitute products or services is high. Revolut must capitalise on client satisfaction and superior service offerings to reduce client turnover risks associated with substitute products. (Please see *Appendix D* for the full Porter's Analysis.)

4.3 Internal Analysis

Revolut adds value through incentives that attract customers. Using Porter's Value Chain (Porter, 1985), the activities that generate value can be identified. Revolut's primary activities focus on the app's banking capabilities, customer support, and the management of digital financial assets. These activities are reinforced by a centralised digital architecture, controlled within a flat management structure. This management model enhances decision-making efficiency, a critical component in the fintech industry.

Together, these frameworks demonstrate how Revolut's strategic advantage stems from its ability to merge value creation and digital efficiency with ongoing innovation. By aligning operations and structure around opportunity-driven growth, Revolut holds a competitive advantage in the rapidly growing fintech industry.

4.3.1 Graph: Porter's Value Chain

Support Activities	**Firm infrastructure**	- centralised digital architecture - employee knowledge - flat organisational structure				**MARGIN**
	HR Management	- recruitment of fintech engineers, data analysts, compliance experts - workplace culture of innovation, vision, and experimentation				
	Tech Development	- continuous R&D in app design, AI, machine learning, blockchain - integrating new financial products (insurance, stock trading, cryptocurrency)				
	Procurement	- relying on external tech platforms - acquiring cloud services, cybersecurity solutions, and software licenses - strategic partnerships with payment processors and API providers				
Primary Activities	**Inbound Logistics**	**Operations**	**Outbound Logistics**	**Marketing & Sales**	**Service**	
	- data integration from payment networks (Visa, MC) and partner banks - management of digital assets - regulatory compliance data and onboarding verification (AML)	- core digital banking infrastructure - app development - transaction processing - FX conversion - AI-driven risk management	- instant delivery of financial services via app - real-time payment notifications - digital statements - global payment integration	- digital marketing campaigns across social media - influencer partnerships - referral programs - brand identity focused on innovation, convenience	- 24/7 in-app chat support, - continuous enhancements and software/ security updates	

Sources: (Revolut, 2025); (Aguilo Llabres et. al., 2025); (Ahmadov, 2025); (Porter, 1985)

4.4 SWOT Analysis

Using a SWOT analysis enables the identification of a firm's internal capabilities and limitations, as well as external factors shaping its growth trajectory. Revolut's main strengths lie in its small person-to-person transactions, which position the firm in a distinct market

niche. Additionally, Revolut has diversified into products such as loans, multi-currency accounts, and cryptocurrency services, broadening its revenue base. Its fully digital operating model eliminates the need for physical branches, reduces fixed costs and supports international expansion (Revolut Ltd, 2024a; Revolut Ltd, 2024b).

Despite these strengths, Revolut faces several internal weaknesses. The fintech sector remains a relatively low-trust space for consumers, and Revolut has faced concerns around account freezes and high fraud rates (Wise, 2024). This service and trust deficit is particularly significant, given the company's goals of broadening services to traditional lending products currently dominated by institutional banks (Streeter, 2021).

Conversely, growth opportunities exist for Revolut. Its ambition to become a "financial super app" by expanding into mortgages, budgeting tools, rewards, and a growing lending portfolio nearing £1 billion could create additional long-term revenue streams (Streeter, 2021; Revolut Ltd, 2024b). If managed effectively, these initiatives could strengthen customer value and reduce reliance on transaction-based income.

A significant issue for Revolut is poor customer support (Reddit, n.d.). Online forums show customers reporting issues with accounts being locked and with existing customer support systems failing to provide resolutions (Reddit, n.d.). This has lowered customer trust in Revolut and may limit app usage, threatening Revolut's long-term goal of competing with traditional banks. If this persists, trust will continue to fall, making it difficult for users to trust Revolut as their primary bank account (See *Appendix E* for further details).

5 | Intervention Stage

5.1 Revolut's Generic Strategy

According to Porter's (1980) Generic Strategies framework, firms achieve a competitive advantage through cost leadership, differentiation, or focus. Applying this framework, Revolut follows a focused differentiation strategy, targeting digital-first users through its "super app" that integrates diverse financial services (Rybacki, 2022). This reflects a deliberate choice to prioritise a tech-driven segment rather than competing in traditional banking segments, aligning with a market where customers demand affordable, technology-driven, and convenient financial solutions. However, its ambitious growth goals and broadening scope indicate a desire to shift towards a broad differentiation strategy, raising questions about whether Revolut can sustain a clear focus as it scales (Revolut Ltd, 2024b; Aithor, 2025).

Revolut's digital-only business model is key to executing its focused differentiation strategy. Operating without physical branches reduces fixed costs and

enables rapid global scaling, but also reflects a strategic trade-off, as the firm accepts limited in-person interaction to operate as a fully digital platform. The company does not compete primarily on price; instead, it reinvests these cost efficiencies into technological development and user experience improvements (Boot et al., 2021). Through automation, data analytics, and AI-driven personalisation, Revolut delivers instant payments, real-time currency exchange, and customised budgeting tools that simplify complex financial tasks (Revolut Ltd, 2024a). Strategically, these features embed Revolut into customers' daily financial routines, strengthening loyalty and reducing the likelihood of users switching to competitors. This technological focus reinforces Revolut's competitive edge by enabling it to differentiate through innovation and service quality, rather than solely on cost.

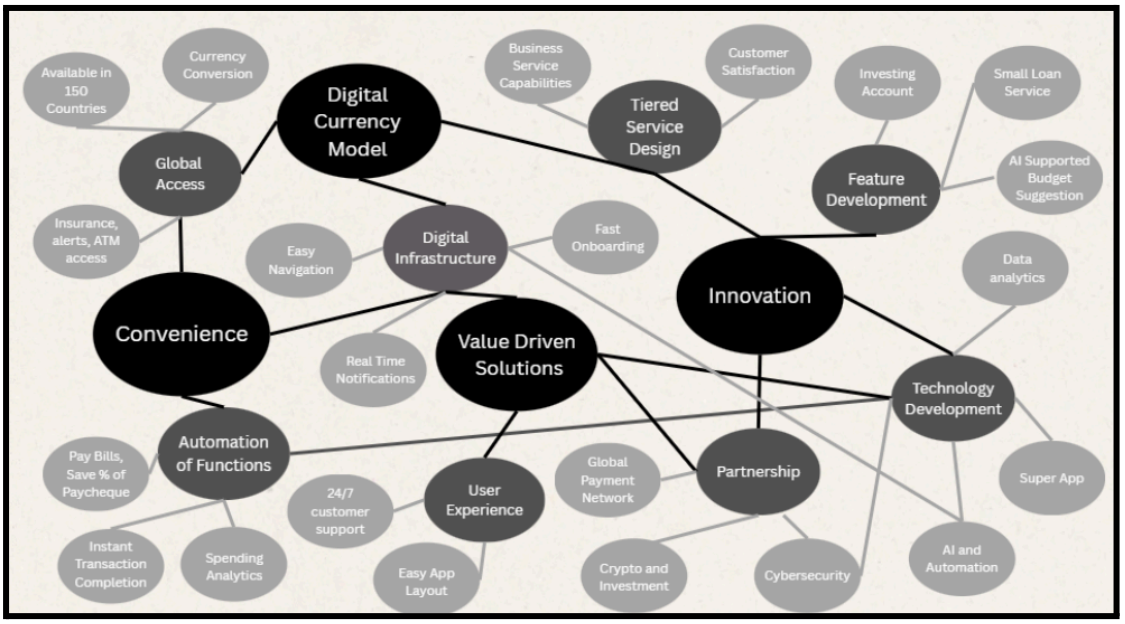
Several strategic choices further reinforce this focused differentiation. Integrating multiple financial tools into a single platform enhances convenience and customer experience, while increasing switching costs as customers become more reliant on its services (Feyen, 2021). The tiered pricing model supports its positioning by balancing accessibility and exclusivity through a freemium model that attracts a broad customer base while monetising premium services (Rybacki, 2022). Together, segment choice, product scope, delivery system, and revenue model are aligned around a focused differentiation strategy based on digital convenience and perceived value, demonstrating how Revolut translates its technological capabilities into distinctive customer value.

These strategic choices are supported by Revolut's internal capabilities, which ensure consistent execution. Its scalable technological infrastructure drives automation, data-based innovation, and continuous service improvement, all key sources of its competitive advantage (Muthukannan, 2021). This is complemented by an innovation-focused culture that promotes experimentation and collaboration across teams. Together, these capabilities ensure that product development, marketing, and customer experience are well-integrated, leading to continuous improvements in Revolut's digital offering and reinforcing its market position.

5.2 Strategic Fit Across Organisation

To evaluate strategic fit across the organisation, an activity map depicts how Revolut's core value propositions align with and are reinforced by its underlying activities. Figure 5.2.1 presents the activity map, which positions value-driven solutions, the digital currency model, convenience, and innovation at the centre, with linked activities and capabilities radiating outward.

5.2.1 Figure: Activity Map



As shown in Figure 5.2.1, Revolut shows strong consistency between actions and the value propositions outlined in the activity map. The company aims to make financial management accessible and straightforward by combining an intuitive app design with a wide range of services all in one place (Rybacki, 2022). Partnerships reinforce convenience and global reach, helping position Revolut as an all-in-one financial platform (Revolut Ltd, 2025f; Rybacki, 2022). The digital revenue model aligns with the tiered design and customer satisfaction, as pricing incentives encourage upgrades while maintaining free entry-level access, supporting an inclusive, value-driven image for both consumers and business users (Thornhill & Horne, 2025; Pawlack, 2023). Given the digital model, operations remain highly efficient and scalable. Digital-only infrastructure reduces operating costs and enables automation, which frees resources for R&D and customer experience improvements (Meridian Trust, 2025; Boot et al., 2021).

There are a few potential inefficiencies in the activity map that need to be addressed. Heavy reliance on digital systems can increase cybersecurity and compliance costs, which must be well-managed to preserve trust and resilience (White, 2021). Although Revolut leverages partnerships with banks and other financial institutions, the absence of physical branches is a deliberate trade-off (Thornhill & Horne, 2025). The company forgoes in-person support and cash-related services in favour of a fully digital model and greater cost efficiency.

Overall, the activity map illustrates how Revolut's activities support value-driven, innovative, convenient, and cost-effective core strategies. Through digital innovation, an

easy-to-use app design, and integrated services, the activity system is mutually reinforcing and operationally efficient, aligning with Porter's concept of strategic fit (O'Flaherty-Emig, 2024).

6 | Evaluation Stage

6.1 Alignment with Revolut's Strategy

Our findings highlight a critical weakness that undermines Revolut's strategic positioning: the quality of customer support. Numerous users report experiencing unexplained account lockouts and prolonged resolution times, particularly for freezes related to fraud or compliance (Venkataramakrishnan, Hollowood & Noonan, 2023). While lockouts are often necessary from a regulatory and risk perspective, the lack of responsive, adequate support erodes trust. This is particularly damaging for premium and business customers, who are central to Revolut's monetisation through tiered subscriptions and higher-value services.

Online reviews and secondary sources suggest that Revolut's customer support underperforms its competitors in two key areas: the availability of support personnel and their training and capabilities. Customers frequently report long waits to reach a human agent and, when they do, agents are sometimes perceived as unhelpful or unable to resolve issues (Reddit, n.d).

While Revolut's overall strategy of focused differentiation via a digital super-app remains sound, findings show that weaknesses in customer service execution are constraining the strategy's effectiveness. The core value proposition of a trusted, convenient, all-in-one finance app is being undermined at key "moments of truth" when customers most need support.

6.2 Proposed Recommendations

To address these customer service weaknesses, we recommend increasing global human support teams and streamlining internal customer support processes. Revolut should adopt a segmented support model that connects subject experts with the specific problems for which they are best suited, allowing complex issues to be resolved quickly and accurately. This would build on Revolut's technological strengths and existing infrastructure to address one of its key weaknesses. These changes would not fundamentally alter strategy, but would reinforce customer trust and retention, which is essential for sustainable growth and expansion into new markets.

Exhibit 6.2.1: Industry Comparison of Customer Support Efficiency

***Source*:** Venkataramakrishnan, S., Hollowood, E. and Noonan, L. (2023)

Revolut's current goals centre around growing its customer base to 100 million users (Tan, 2025). In the short run, this recommendation conflicts with the neobank's business model, which aims to be an operationally lean fintech. However, in the long term, implementing this strategy will complement the company's digital-only business model, enabling it to be more competitive in traditional lending products and client retention. The recommendation will ensure retention remains high, enabling Revolut's client base to continue growing. By enhancing customer service, Revolut can promote greater user trust in its services, aligning with the company's long-term objectives of offering a comprehensive, entirely online banking experience that can compete with traditional banks (Streeter, 2021). Revolut has begun to make strides towards this goal, increasing its lending portfolio to nearly €1 billion in 2024 and exploring ways to facilitate cash deposits (Revolut Ltd, 2024b; Revolut Ltd, 2025g). Increasing their available human capital will allow Revolut to continue building user trust by ensuring issues are addressed promptly and effectively.

6.3 Roadmap for Change

6.3.1 Short Term (0-12 months)

In the first year, the priority is to reduce customer frustration and restore trust by introducing 24/7 human support for critical issues, ensuring customers facing locked accounts or blocked cards can reach customer support quickly. A clear triage model will limit AI chatbots to low-risk, simple queries, while automatically routing complex and high-risk cases to trained human agents. Revolut will also set and track service standards, defining targets for

response times and first-contact resolution. It will report performance internally from the outset and share selected metrics externally as results improve.

6.3.2 Medium-Term (1-3 Years)

The focus in this period is to build a support system staffed by employees trained to handle a variety of cases and to support product innovation effectively. Specialised support hubs will be established, with dedicated expert teams for fraud, premium customers, and technical issues based in existing regional and global offices. Further investment in staff training will equip agents with the skills and knowledge required to aid vulnerable customers. In addition, support will be embedded into product design, making it easier for customers to speak with an agent during high-value transfers, disputes, account charges, or lending decisions.

6.3.3 Long-Term (3-5 Years)

In the long term, Revolut should position itself as a trusted digital bank by marketing its enhanced support systems to existing customers and underserved segments, and by demonstrating commitment to service standards through published performance metrics. An efficient AI–human operating model will be maintained by automating routine requests to preserve efficiency, while trained agents handle complex cases. Periodic company-wide evaluations and regular reviews of customer feedback will be conducted to confirm the overall impact of the strategy, with demonstrated results used to support licence applications and justify further product and market expansion.

6.4 Evaluation Metrics

To assess the effectiveness of this roadmap, Revolut should track a set of KPIs across customer experience, operational performance, and risk. The baseline and target values in the chart are hypothetical and used only to illustrate how Revolut could set measurable goals.

Table 6.4.1 Customer Experience Metrics

These metrics indicate whether customers perceive genuine improvements in their experience, particularly during high-stakes moments such as lockouts and fraud.

Metric	Description	Baseline	Target Year 1	Target Year 3	Target Year 5
Customer Satisfaction Score	Satisfaction with customer support interactions	E.g. 4.2/5	4.4/5	4.6/5	4.8%
Customer Effort Score	Customer likelihood to recommend Revolut	E.g. 3.7/5 (Comparably, 2025)	4.0/5	4.3/5	4.5/5

Table 6.4.2 Operation Support Metrics

These metrics assess how quickly Revolut responds to critical issues and how effectively it resolves them.

Metric	Description	Baseline	Target Year 1	Target Year 3	Target Year 5
Response Time	Average time for an agent to respond to lockouts, fraud, or locked cards	15 minutes	12 minutes	10 minutes	7 minutes
Resolution Time within 24 hours	Percentage of high-risk cases resolved within 24 hours	55%	65%	75%	85%

Table 6.4.3 Risk and Trust Metrics

These metrics link the support roadmap to Revolut's goals for risk management, regulatory credibility, and product adoption.

Metric	Description	Baseline	Target Year 1	Target Year 3	Target Year 5
Churn Rate	Percentage of premium and business customers leaving per year	12%	11%	9%	7%
Fraud Loss Rate	Fraud-related losses as a percentage of total transaction volume	0.027% (estimated based on fraud reports in the UK) (Finextra, 2024)	0.023%	0.019%	0.017%

7 | Consulting Process

As strategy consultants, our team followed a structured consulting process from client selection through analysis, recommendation, and evaluation. We aimed to be analytical and client-focused, so we framed ourselves as an external team advising Revolut's senior management. This required us to prioritise feasibility and impact over theoretical solutions. We also emphasised professionalism in our communication, respected deadlines, and structured our report and presentation.

At an early stage, we assigned roles based on individual strengths and preferences. We also aligned our schedules, agreed on meeting times, and set internal deadlines for each of the four stages: Orientation, Diagnostics, Intervention, and Evaluation. We maintained weekly contact primarily through WhatsApp and MS Teams, checking in twice per week, and worked collaboratively in a shared Google document to monitor progress and suggest edits.

In the orientation stage, we collectively brainstormed potential financial firms, including AIB and BOI. We ultimately selected Revolut for its digital-only model, rapid growth, and popularity among students, making it a relevant client in the fintech sector. We then divided the tasks, with three members focusing on the Orientation stage (client background, preliminary literature review, and strategic issues). The remaining team members worked on Diagnostics (macro-environment, internal, and industry analysis). Given the volume of secondary research, we held a meeting after these stages to share findings, identify Revolut's key weaknesses, and narrow down to two strategic issues to address. We then reassigned roles, with three members developing the Intervention and three on the Evaluation stage. Once the intervention work was completed, we met again to review Revolut's strategy, agree on a preferred strategic issue and recommendation that supports Revolut's current strategy, and refine the recommendation and implementation plan so that our final proposals were evidence-based and aligned with the client's needs and goals.

Throughout the consulting process, we made frequent, effective decisions through consensus, with Katherine as our leader, guiding the team and acting as a mediator. We allocated tasks on a rolling basis and based on each team member's interest in a specific area. This helped our team identify meaningful and interesting research to inform our recommendations. The contract outlined team expectations, including attendance at weekly meetings, and meaningful, thorough work contributions..

Based on critical reflection, what worked well for our team was thoroughly understanding the firm's current business model and service offerings. This helped to structure our solutions and recommendations more effectively and conduct strategic research. In addition, a challenge the group faced was selecting our main recommendation. Every team member has their own opinion, and may therefore have different views on the ideal recommendation. This was overcome through honest discussions and frequent team meetings. Throughout this process, we learned that ultimately, consulting is not a 'one size fits all' approach. Strategies must be tailored to the client's needs and goals. Overall, the most important takeaway that our group agreed on was that strategy consulting depends on team synergies–leveraging each individual's strengths and talents for the best outcomes.

8 | Conclusion

Overall, our analysis suggests that Revolut maintains a strong strategic position within the fintech industry, supported by a focused differentiation strategy and a scalable digital platform. Its external environment, industry structure, and internal capabilities demonstrate strong strategic alignment, particularly in technology, product integration, and innovation-led

growth. However, the evaluation stage identifies customer support as a key weakness that limits the strategy's effectiveness. During account lockouts, fraud investigations, and payment disputes, Revolut's current support model does not consistently meet the transparency and responsiveness standards expected of a financial institution, particularly for premium and business customers, who are essential to monetisation, cross-selling, and long-term growth.

To address this gap, Revolut should expand access to trained human agents for complex and high-risk cases, establish specialist teams for different types of issues, and improve the AI–human triage process to resolve cases at first contact whenever possible. Revolut can track progress with clear KPIs for customer experience, operations, and risk, using metrics such as satisfaction scores, response and resolution times, churn rates, and fraud loss rates. Aligning customer support with the overall strategy will strengthen customer trust and support Revolut's growth in existing and new markets.

10 | Appendices

Appendix A: Revolut's Revenue Streams

Subscriptions and Paid Tiers

Operating on a freemium model, Revolut offers free basic accounts and paid tiers, such as Plus, Premium, and Metal, which generate recurring revenue. These plans provide added benefits, including higher withdrawal limits, travel insurance, lounge access, and exclusive cards (Revolut Ltd, 2025b).

Transaction-based Income

A primary revenue source is transaction fees. Revolut earns interchange fees from merchants whenever users pay with their card, as well as foreign exchange (FX) fees on currency conversions that exceed free limits or occur during weekends (Curry, 2025).

Wealth, Trading, and Crypto Services

Revolut also generates income through trading services, allowing users to buy and sell stocks, commodities, and cryptocurrencies. Revenue comes from trading fees after commission-free limits and small bid–ask spreads (Curry, 2025).

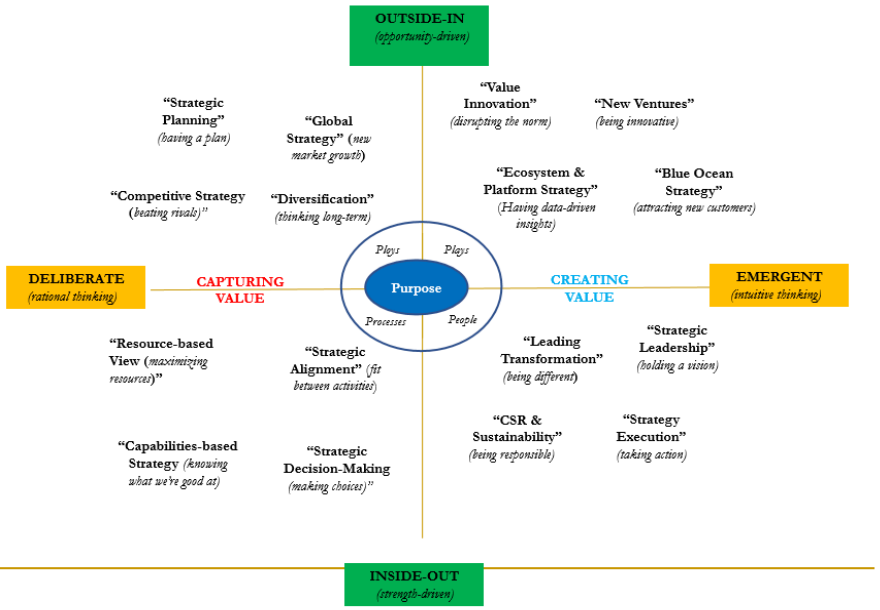
Business Banking and Corporate Services

The company monetises business accounts for freelancers and SMEs, offering multi-currency accounts, expense management tools, payment APIs, and corporate cards.

Interest Income

As Revolut matures, it increasingly earns interest on customer deposits and from lending services, boosted by higher interest rates.

Appendix B: Strategic Thinking Framework for Revolut



Appendix C: PESTEL Analysis

PESTEL Macro Factor	Description	Impact
Political / Regulatory	The political and regulatory environment remains a key factor in analysing the macro-environmental challenges and opportunities Revolut faces across the EU-UK markets. While they're yet to receive their UK banking license and have been in the mobilisation period for over 14 months, this regulatory hurdle points to potential operational expansion elsewhere (Al-Khalaf and Arnold, 2025). Securing the UK banking license remains the firm's top priority. Still, in the meantime, Revolut has announced plans to expand its presence in Western Europe by opening a new headquarters in Paris. This move will involve a €1 billion investment over three years into the French market. The firm's goal with this dual-headquarter approach is to offer a more tailored experience across different European markets, while also accelerating growth and enhancing regulatory engagement (Methri, 2025). In the current regulatory environment for fintechs operating in the EU, the primary consideration is the Digital Operational Resilience Act (DORA). This regulation took effect on 17 January 2025, and it has implications for all financial services entities operating across Europe. The regulatory framework put forth in the DORA looks to improve digital security across the financial services sector by requiring companies to improve their ICT management (information and communication technology) processes (O'Neill, 2024). While this is excellent news for customers across the EU, financial firms will have to increase resource expenditure to be compliant with this new regulatory framework. However, this can also be an opportunity for Revolut, as it can demonstrate its commitment to data security, leading to improved perceptions among existing and prospective customers.	Moderate threat due to short-term adjustment hurdles, particularly around compliance across the entirety of their EU operations. However, it also poses a long-term opportunity to demonstrate the firm's commitment to cybersecurity and client's data protection.
Economic	The economic environment of the EU and UK is stable. In terms of market size, Revolut is in a strong position, as it holds a banking license in the EEA, allowing it to operate as a Neobank in 30 countries across Europe, reaching approximately 450 million people. Within the short term, real GDP growth is projected to remain steady, but forecasts indicate that trade might slow within the next year due to US tariffs on the European market. However, the European Central Bank has forecasted that both GDP and inflation will improve by 2027, at 1.3% and 1.9% respectively (ECB, 2025). In both the UK and the European economy, current inflation levels signal potential changes in the UK's bank rate or the ECB deposit rate. According to the ECB, inflation is forecasted to remain relatively steady over the next few years, which can have implications for central bank interest rates. If rates fall further, Revolut's margins could tighten, posing operational challenges for the digital bank.	Overall, this poses a low-level threat. The European economy is doing relatively well and is projected to remain stable over the next five years, even amid current global trade tensions.
Social	The main social factors in the EU fintech landscape center on the adoption of open banking. In a Fintech Magazine article earlier this year, analysts state that market projections signal a growth trend in open banking adoption in the coming years. According to market data, the market is projected to grow from $10.14 billion in 2025 to $35.36 billion in 2033, pointing to a CAGR of 16.9% (Thompsett, 2025). Leading UK Fintech company, Finastra, signalled that this trend is driven by high internet penetration, high smartphone adoption in digital banking, and an increasingly tech-savvy European population (Lympousi, 2025).	Moderate regulatory threat in the UK due to increased societal expectations that digital banks take greater responsibility amid fraud or scam incidents. This could become an issue for Revolut if cybersecurity practices are not bolstered.

	In the UK, the region's Authorised Push Payment (APP) legislation, which took effect on 7 October 2025, has implications for social expectations regarding push payment fraud. This new policy makes payment service providers liable to reimburse customers for push payment fraud up to a mandatory maximum of £85,000 (Allen and Spencer, 2024). This increased regulation of payment fraud reflects a growing social expectation that financial institutions must protect their consumers, especially amid rising digital fraud.	However, the positive trends in digital banking adoption pose high opportunities for the firm and greatly outweigh the negative social implications of the UK's APP legislation.
Technological	The current technological advancements in artificial intelligence offer significant opportunities for digital banks in Europe within the medium- to long-term. Advancements in generative AI stand to make a significantly positive impact on the industry of digital banking, particularly around compliance, cybersecurity, and customer insights. The regulatory environment is only getting more intense for financial institutions operating in a digital capacity, such as Revolut. This creates compliance hurdles around safeguarding customer data, funds, and information. Thankfully, advancements in machine learning and Gen AI will make scanning vast amounts of financial transaction data much more feasible, enabling enhanced pattern recognition to help predict fraud (Thompsett, 2024). This is great news for digital banks looking to bolster their cybersecurity practices, especially amid rising security regulations. However, implementing AI technology can also pose risks. Banks, by nature, hold vast amounts of sensitive customer data, so the implementation of AI technology that scans this data raises concerns about data security and privacy (Chlouverakis, 2024).	Heightened opportunity to improve cybersecurity practices at Revolut, potentially facilitating the process of becoming compliant on data security regulations. However, due to the novelty of the technology, medium- to high-level risks exist if the proper guardrails are not instituted.
Environmental	The global shift towards stricter ESG policies has significant implications in the EU landscape in which fintechs operate. Companies of all kinds, including financial institutions, are under heightened scrutiny for greenwashing or untruthful reports that misrepresent their environmental impact. In a 2024 consumer survey conducted by PwC, it was found that despite the rising cost of living, some consumers stated that they would still be willing to pay 9.7% more for goods and services that are sustainable (PwC, 2024). This trend is also evident among investors in Europe, as surveys by Deutsche Bank indicate that approximately 1 in 5 European investors prioritize sustainable investments in their portfolios (Deutsche Bank, 2024). These two market trends in the EU consumer and investor market signal heightened expectations for enhanced ESG practices across all firms. These trends have significant implications for fintechs that are looking to differentiate themselves from the competition, not only in their service offerings but also in their reporting and sustainability practices.	The current social expectations that firms must uphold regarding ESG pose a moderate threat to Revolut, especially in the event of poor reporting or greenwashing allegations. Conversely, there is a high level of opportunity for fintech's that are dedicated to making an impact through sustainable practices, green financing, and compliant ESG reporting. If Revolut becomes a leader in this space, they stand to attract and retain a new generation of consumers and investors who value green finance.

Legal	Understanding the legal environment that fintechs and neobanks currently operate in is critical to fully develop the macro-environmental landscape. Within the EU context, the Payment Services Directive 3 & Payment Services Regulation (PSD3/PSR) are expected to have the biggest impact on traditional banks, fintechs, and neobanks across the board. The PSD2 directive, introduced by regulators seven years ago, completely changed the European payments landscape by enhancing safety and fostering competition. Undeniably, however, this also led to significant compliance costs and complexity for banks and payment service providers. These operational hurdles are likely to recur for financial institutions when the enhanced payment regulations take effect in 2026 (Dwyer, 2025). Another EU legal implication for Revolut is the Markets in Crypto Assets Regulation (MiCA); a regulatory framework that seeks to enhance the safety of crypto assets across the EU. It became effective for Crypto-Asset Service Providers (CASPs) on 30 December 2024 (Central Bank of Ireland, 2025). Under this new regulatory framework, which applies to all EU member states, financial institutions must undergo authorisation before they can become official CASPs. While Revolut just obtained permission to act as an official CASP a few weeks ago through the Cyprus Securities Exchange Commission, the fintech will have to adapt to the regulatory hurdles associated with MiCA (Psara, 2025).	Medium to high impact on operations, potentially signalling a need to alter current data security practices. The heightened expectations for data compliance, particularly in digital banking and payments, could mean restructuring current practices to comply with new regulations. This will require significant time, professional consultation, and will likely be costly for Revolut over the following years. However, these expenses should be seen as a long term investment in Revolut's internal controls when it comes to compliance. Instituting the proper controls will signal to regulators that Revolut is a serious player in the industry, and an asset to the economies in which it operates.

Appendix D: Porter's Five Forces

Competitive Rivalry

The fintech sector is filled with branchless competitors, and Revolut's main rivals include Wise, N26, and Monzo, which offer similar digital services (Figueiredo, 2023; Roselló, 2025). To further explain;

Wise: Launched in 2011, Wise is another firm taking significant market share in the financial technology space. They are focused on digital banking, specifically affordable, simple international money transfers and multi-currency accounts. In addition, Wise offers investment services and places significant emphasis on superior customer support (Wise, n.d.).

N26: Launched in Berlin in 2013, N26 claims to be "pioneering the way for modern, digital banking" (N26, n.d.). They rival Revolut with mobile services such as an easy-to-use, low-fee investing platform, current/savings accounts, and budgeting tools (N26, n.d.).

Monzo: Based in the UK, Monzo is another digital or 'app-based' bank that offers clients similar services to those of its competitors (Garner, 2025). For example, current accounts, investing platforms, budgeting tools, and facilitating easy spending abroad are key services that directly position Monzo against competitors such as Wise and Revolut (Garner, 2025).

Competition Tactics

To briefly explain, the primary industry competition tactics of firms include:

1. *Costs/fees:* for example, firms may compete based on ATM fees, currency exchange fees, and plan fees (Figueiredo, 2023)
2. *User experience:* includes ease of use, a user-friendly interface, and exceptional customer support
3. *Width of Product line* (i.e., does the range of products meet customer needs effectively?)

Bargaining Power of Suppliers

Revolut's suppliers differ from those of traditional firms due to its fully online model. Key suppliers include infrastructure providers such as Google Cloud and AWS, as well as card issuers such as Visa and Mastercard. As these markets are oligopolistic, supplier bargaining power is high.

1. *Infrastructure providers such as Google Cloud:* In recent news, Revolut announced that a "multi-million-dollar partnership will involve Revolut leveraging Google

Cloud's secure, scalable infrastructure to power its rapidly growing global systems, ensuring seamless performance even as its user base continues to expand exponentially." (Revolut Ltd, 2025f). It is reasonable to estimate a very high bargaining power of infrastructure providers given the limited number of similar providers such as AWS and Azure (i.e., structured as an Oligopoly). Also, the significant time and cost required to transition to a new provider may be infeasible.

2. *Card Issuers such as Visa and Mastercard*: Given the duopoly structure of the payment industry, with Visa and Mastercard as the sole key players, this leaves little room for Revolut to bargain, as card issuance is essential to its business model (Westberg, 2025).

Bargaining Power of Buyers

The substantial number of competitors within the fintech and digital banking space lowers barriers for buyers to switch service providers. For this reason, buyers exert significant influence over pricing, including account fees and tiered pricing, and they influence the expected range of service offerings.

To further explain, many companies such as Revolut and Wise preach the ease of use and sign-up for their platforms, which is another consideration that supplements the reasoning for the high bargaining power of buyers in the fintech/digital banking sector (Roselló, 2025a). Also, briefly, there is evidence that the relatively high bargaining power of buyers stems from lower differentiation than in other industries. That is, fintech firms offer services that are somewhat similar and compete primarily on fees, pricing, and user experience (Figueiredo, 2023).

Threat of New Entrants

1. *Regulatory Licensing:* the scalability of services offered by fintechs such as Revolut partly depends on obtaining banking licenses, which may present administrative challenges of entering this sector (Vixio.com, 2021)
2. *Building trust (aligns with acquiring customers):* as with any firm entering a new market, it takes time and capital to build trust and relationships with clients, which can pose an initial hurdle.

Threat of Substitute Products or Services

Substitute services are common in fintech. If services offered are deemed unsatisfactory and unable to meet consumer needs, many users might opt for various alternatives. Hence, the threat of substitute products or services is at the upper end of the spectrum for this sector and, consequently, for Revolut. The following outlines some

potential substitute products that could rival fintechs and online banks, such as Revolut (PayPal, 2025):

1. *Traditional Banks and Credit Unions:* These include traditional brick-and-mortar options that have been popular throughout history, such as AIB, Bank of Ireland, PTSB, and Progressive Credit Union. In recent news, well-known and established banking institutions have announced plans to enter the financial technology sector and rival high-roller players such as Revolut, further adding to the already cutthroat landscape (Varley, 2025). These firms offer rivaling products such as savings or current accounts, investments, and FX exchange (Bank of Ireland, n.d.)
2. *Peer-to-Peer (P2P) Platforms*: For example, as explained by PayPal Editorial Staff (2024), "convenient, fast, and easy, P2P payments allow individuals to send and receive funds in minutes among friends, family, acquaintances, and even for goods and services. This method bypasses the need for cash or physical cards, making it easy to split bills, send gifts, or repay money." This rivals the functions included in Revolut's service offerings, specifically money transfers (Revolut Ltd, 2025d).

Appendix E: SWOT Analysis

Strengths:

Revolut is currently one of the leading fintech companies on the market. It is a purely online bank that offers a diverse range of financial products, spanning from personal loans to multi-currency accounts and cryptocurrency holdings. The company currently has a customer base of 52.5 million users and, in 2024, processed over £1 trillion in transactions. Revolut operates as a licensed bank in 30 countries and is the top finance app in 19 European countries (Revolut Ltd, 2024b).

Revolut thrives on word-of-mouth marketing. When people are splitting bills or sending a friend money, those who use Revolut on one end will often convince the person on the other end to get Revolut. In Ireland, the slang term "to Rev" someone, meaning to pay them, has become popular for this very reason.

As a digital-only bank, Revolut doesn't operate any physical locations, and the company cuts down on operating costs associated with physical branches, such as retail space and employee salaries. Additionally, Revolut doesn't deal with any cash, which helps it avoid costs associated with handling cash. Revolut recently rolled out a way for customers to deposit cash by 'depositing' it at a grocery store or shop that has formed a partnership with Revolut (Revolut Ltd, 2025g).

Weakness:

The fintech industry is a relatively new space that leaves many customers and investors wary of new "neobanks," leading them to view these institutions as less trustworthy than traditional banking institutions. In 2023, *The Irish Times* reported that an investment trust had reduced its stake in Revolut by £4.7 million (The Irish Times, 2023).

According to research by SmartSearch, an anti-money laundering company, as of 2021, 66% of consumers "do not trust that they are 100% safe to conduct all their banking needs online" (Credit Connect, 2021). Additionally, as of 2023, UTIMACO, an IT security company, found that 36% of consumers do not fully trust their bank with their money and data. This survey covers both traditional and neobanks (Financial IT, 2023).

Referencing online forums such as r/Revolut (Reddit, n.d.), numerous posts outline how customers' accounts were deleted, frozen, or otherwise restricted. Users complain of unhelpful support and no reasons being provided as to why their accounts have been restricted (Reddit, n.d.). On the opposite end of the spectrum, Revolut also has many very positive reviews, holding a score of 4.4/5 on Trustpilot (Trustpilot, 2019). While these posts

are user-submitted, these two extreme ends of the user experience spectrum highlight Revolut's inability to deliver a consistent customer experience.

Revolut saw a record year for growth in the year ended 31 December 2024 (Revolut Ltd, 2024b). Revolut's user base grew by 14.5 million users, its monthly transactions increased by 59% to 940 million, and its total customer value increased by 66% from £18.2 billion to £30.2 billion. Revolut's growth is immense and fast-paced, yet last year it was named in more fraud cases than any major UK bank (Wise, 2024). Revolut is continuing to push for expansion, investing heavily in the Singaporean market while aiming for the lofty goal of 100 million users (Tan, 2025). Despite its security issues, Revolut is still firmly focused on customer base growth, drawing into question whether its existing security measures can adequately protect its current and future customer base.

Opportunities:

Revolut's goal is to expand its service offerings into a "financial super app". The company has expanded its product offerings to include mortgages, and its app offers budgeting tools and rewards systems integrated with standard bank accounts (Revolut Ltd, 2020; Streeter, 2021).

Revolut has continued to extract value from existing customers, with adoption of paid Revolut plans increasing by a reported 45% in 2024. Continuing to improve its paid plan offerings could see a similar increase in paid plan adoption in the coming years (Revolut Ltd, 2024b).

Revolut has continued to extract value from existing customers, with adoption of paid Revolut plans increasing by a reported 45% in 2024. Continuing to improve their paid plan offerings could see a similar increase in paid plan adoption in the coming years (Revolut Ltd, 2024b).

Revolut has also continued to grow its lending portfolio, with the portfolio reaching just under £1 billion (Revolut Ltd, 2024b).

The company also acquired a restricted UK banking licence in 2024; this licence allows Revolut to begin small-scale initial banking operations in the UK. Beginning to establish itself with the UK customer base as a 'legitimate' bank would allow the company to hit the ground running if and when its full licence is granted (The Banker, 2024).

Threats:

Revolut has acquired a restricted UK banking licence. This restricted licence acts as a preliminary trial period for a bank to build its funding, operations, and infrastructure. Revolut

has strong backing, but should it fail to acquire its full licence, it would lose access to a significant market in the UK (The Banker, 2024).

Within Ireland, Revolut is facing threats from three of the major banks. AIB, PTSB, and BOI have teamed up to develop and launch their own competitor app called Zippay. The app will offer the ability to send and receive funds, as well as split bills and make requests. The new app, in combination with the infrastructure of a ‘traditional bank’, may be more attractive to some consumers than the purely online experience offered by Revolut (Pepper, 2025).

In 2024, global fintech investment fell to a low point of $95.6 billion. This is the lowest mark in a seven-year span and is down from the previous year's $119.8 billion. As Revolut continues to push for growth, placing an over-reliance on external investment while the fintech market is declining could prove costly if the company finds itself unable to raise the funds (Godsil, 2025)

Appendix F: Team Contract

Team Name: Revolut

***Team #*:** EB20

1. Katherine Moyer
2. Isabella Ricetto
3. Maria Contreras Robles
4. Oliver Lopez
5. Daniel Cino
6. Aidan Mistry

Team Procedures

1. Day, time, and place for regular team meetings:

We will meet weekly on Saturdays from 2-4pm in person. Location will be in the library booked meeting room, or online through teams.

2. Preferred method of communication in order to inform each other of team meetings, announcement, updates, reminders, problems:

We have created a Teams chat to share all communications and files, along with a google drive. Reminders for meetings and format will be sent out the day before. Problems are communicated verbally in meetings and in online chat as they come up.

3. Decision-making policy:

Our group will make decisions through open discussion, aiming for consensus whenever possible. If we can't reach consensus, we will use a majority vote to move forward while respecting everyone's input.

4. Method for setting and following meeting agendas

A rough meeting agenda outline will be put in drive the day before every meeting to ensure understanding of meeting content. Conversations in meetings will be structured to follow agenda and end at the appropriate time.

5. Method of record keeping. How & when will the minutes be disseminated? Where will all agendas & minutes be kept?

Everyone will take turns taking meeting notes on google docs, the file will be saved in a folder on the shared google drive for future reference.

Team Expectations

Work quality

1. Project standards:

Our group will maintain high-quality work by meeting deadlines, staying organized, and ensuring all contributions are clear and accurate.

2. Strategies to fulfill these standards:

We will communicate regularly, divide tasks based on strengths, and review each other's work to keep everything consistent and on track.

Team Participation

1. Strategies to ensure cooperation and equal distribution of tasks:

We will divide responsibilities based on each member's strengths and availability, and check in regularly to make sure the workload stays balanced. If someone feels overwhelmed, the group will adjust tasks as needed

2. Strategies for encouraging/including ideas from all team members

We will create space for everyone to share their ideas during meetings and use group chats or documents for people who prefer writing their thoughts. All suggestions will be discussed respectfully before decisions are made.

3. Strategies for keeping on task:

We will set clear deadlines, use reminders, and create short progress updates during each meeting. If we get off track, we will refocus on our goals and outline the next steps.

4. Preferences for leadership:

We prefer a shared leadership approach where responsibilities rotate based on the task. This ensures everyone has a chance to guide the group and keeps the project fair and collaborative.

Personal Accountability

1. Expected individual attendance, punctuality, and participation at all team meetings:

All members are expected to attend scheduled meetings on time and participate actively in discussions and decision-making.

2. Expected level of responsibility for fulfilling team assignments, timelines, and deadlines

Each member is responsible for completing their tasks by the agreed-upon deadlines and informing the group promptly if challenges arise.

3. Expected level of communication with other team members:

Members will communicate regularly and respectfully, providing updates on progress and responding to messages within a reasonable timeframe.

4. Expected level of commitment to team decisions and tasks

Once the team agrees on a plan or decision, all members are expected to support it and contribute to carrying it out to the best of their ability.

Consequences for Failing to Follow Procedures and Fulfill Expectations

1. Describe, as a group, how you would handle infractions of any of the obligations of this team contract:

If a team member does not meet an obligation, we will address it respectfully by discussing the issue with them, clarifying expectations, and offering support to help them get back on track.

2. Describe what your team will do if the infractions continue:

If the behavior continues, the team will document the issue, redistribute tasks if necessary, and involve the instructor for guidance or intervention to ensure the project can move forward successfully

****

a) I participated in formulating the standards, roles, and procedures as stated in this contract.

b) I understand that I am obligated to abide by these terms and conditions.

c) I understand that if I do not abide by these terms and conditions, I will suffer the consequences as stated in this contract.

1) Maria F. Conteras	date: 22/11/2025
2) Isabella Ricetto	date: 22/11/2025
3) Katherine Moyer	date: 22/11/2025
4) Daniel Cino	date: 23/11/2025
5) Aidan Mistry	date: 23/11/2025
6) Oliver Lopez	date: 23/11/2025
