Business Plan

For the Financial Year Ended
31 December 2027 (FY2027)

Our Idea

Intelligent photochromic cycling glasses that project navigational cues directly into your line of sight

NEW ENTERPRISE DEVELOPMENT PROJECT

Module Code	BAA1003
Lecturer	Prof. Eric Clinton
Programme	EB4
Team Number	35
Team Members	Daniel Cino (46528)
	Madeleine Helber (45643)
	Oliver Lopez (46524)
	Juliana Dury (46562)
	Aidan Mistry(46510)

DCU

Date of Submission 17 April 2025

1. Executive Summary

RIDEAWARE EXECUTIVE SUMMARY

RideAware Ltd. is a Canadian-German wearable tech startup based in Dublin, Ireland. Our product aims to assist everyday cyclists with convenient turn-by-turn navigation through innovative AR technology.

RideAware's initial target niche encompasses European urban commuters, performance cyclists, and tech-savvy users before a further expansion plan into the DACH region.

In terms of financial feasibility, our projected sales in year one, two, and three are forecasted to be €388,000, €504,000, €655,720, respectively. Overall, our R&D-heavy business model requires external capital investment which justifies our €300,000 investment ask.

RideAware AR Lens Mockup

RideAware Executive Summary Snapshot

Three-year financial highlights

	Year 1	Year 2	Year 3
Sales	€388,000	€504,000	€655,720
Exports	n/a	n/a	n/a

Investment	€300,000	Reinvestment / R&D	Reinvestment / R&D
Employment	6	6	6

Executive Summary Table

2. Company Description

RideAware Ltd. was founded by five entrepreneurial students who want to enhance the cycling experience through heads up technology.

Juliana Dury

Chief Executive Officer
Responsible for strategy and team management.

Daniel Cino

Chief Financial Officer
Manages financial planning, budgeting, investment strategies

Oliver Lopez

Chief Technical Officer
Responsible for Technical Partnerships and Excellence

Madeleine Helber

Chief Sales Marketing Officer
Responsible for brand development, sales and marketing, promotional strategies

Aidan Mistry

Chief Operations Officer
Oversees supply chain management, logistics and customer service, ensuring operational efficiency.

Shareholder Structure
RideAware's ownership is distributed among the founding members and software development team. The founders have collectively invested €100,000. To supplement the equity investment, the company is seeking an additional €200,000 from angel investors.

Board of Directors
Chairperson: Juliana Dury (CEO)
With experience in audit and HR management, Juliana leads the board with a focus on purpose-driven leadership and strategy.

Director: Daniel Cino (CFO)
Daniel brings hands-on experience in corporate finance, budgeting and forecasting from leading companies like Indeed. He ensures sound financial planning and risk management.

Director: Oliver Lopez (CTO)
Oliver Lopez brings tech affinity and connections to technical experts supplemented by financial experience at PWC.

Director: Madeleine Helber (CMO)
With international experience in marketing and sales, driving brand visibility, Madeleine strives for customer engagement and digital growth initiatives.

Director: Aidan Mistry (COO)
With experience from An Post, Aidan Mistry supports product development, supply chain strategy and regulatory compliance.

2. Company Description

RideAware
See Beyond

LEGAL STATUS

RideAware *Ltd*. is officially incorporated as a Private Limited Company (LTD) in Ireland. This legal structure was strategically chosen for its robust framework, which is essential for a high-tech hardware startup with global scalability. Recommended by the Irish Government for innovation-led SMEs, the LTD format provides a protective legal and financial shield by limiting the liability of its five founders to the amount of their initial capital contributions (Citizens Information, 2024). This risk-mitigated foundation ensures that the personal assets of the promoters are safeguarded as we navigate the capital-intensive stages of prototyping and manufacturing. Furthermore, our LTD status is a critical pillar for RideAware's international ambitions. Ireland is a globally recognised hub for technology and wearable exports. This positioning facilitates seamless cross-border trade, particularly as we look toward expansion into the UK and EU markets where the "Vision Zero" safety movement is gaining momentum. Ireland's membership in the EU, combined with its modern regulatory environment (such as the Control of Exports Act 2023), provides a transparent and stable platform for us to collaborate with foreign investors and manage complex hardware supply chains. From a taxation perspective, the LTD format offers significant financial efficiency. RideAware is subject to a competitive corporate tax rate of 12.5% on trading profits(Revenue Commissioners, 2025).

However, as an R&D-heavy enterprise developing proprietary AR and sensor technology, we are uniquely positioned to benefit from Ireland's Research & Development (R&D) Tax Credit(Revenue Commissioners, 2024). This allows us to claim a payable credit of up to 30% on qualifying innovation expenditure, effectively lowering our net development costs and allowing us to reinvest capital into further product iterations and intellectual property (IP) protection.

DEVELOPMENT TO DATE

The development of RideAware Ltd. reflects a focused journey from a technical concept to a market-ready innovation. Our founding team, comprised of five professionals with complementary skills in operations, product development, finance, marketing, and sales, came together in late 2025 with the shared mission of making urban cycling safer and more intuitive through augmented reality. Our development timeline so far includes the following milestones:

Q4/2025: Ideation, Technical Feasibility & Team Foundation

The founding team, five individuals with multi-disciplinary expertise in engineering, global business, and strategic marketing, united around the shared mission of solving the "Cost of a Glance" for cyclists. During this phase, we conducted an initial Feasibility Study, established our "See Beyond" brand identity, and designed our signature eagle logo. Early brainstorming sessions defined the core hardware requirements for the AR frames.

2. Company Description

RideAware
See Beyond

Q1/2026: Market Validation & Technical Consultation

Extensive desk research and qualitative analysis were conducted to validate the market of 41 million frequent EU cyclists. We engaged in technical consultations with the DCU Sensor Technology Department to verify the integration of bone-conduction audio and heads-up displays. This period culminated in a comprehensive Marketing Report that identified the "Tech-Savvy Commuter" as our primary entry segment.

Q2/2026: Financial Modelling & Prototyping Roadmap

We developed a robust three-stage prototyping plan to transition from a Minimum Viable Product (MVP) to a market-ready device. In parallel, we finalised a detailed financial plan, including the **Break-Even analysis (Month 11)** and the projection of a **19.5% EBITDA margin** by Year 3. This phase ensured the venture was financially viable and ready for the intensive R&D stage.

Q3/2026: Legal Incorporation & Supplier Outreach

RideAware Ltd. was officially incorporated in Ireland as an **LTD**, providing the legal foundation for international scalability and IP protection. We initiated non-binding conversations with specialised lens and sensor suppliers to explore logistics scalability. We also drafted our internal distribution strategy, focusing on a dual-channel DTC and retail partner model.

Q4/2026: Pitch Preparation & Strategic Network Building

We developed our final investor pitch deck, establishing our "Ask" of **€100,000 for a 10% equity stake**. We secured verbal commitments from academic and industry advisors in the fields of HCI (Human-Computer Interaction) and AR.

ADVISORY NETWORK & EXPERT SUPPORT

In recognition of our current skill gaps in the areas of high-tech hardware engineering, intellectual property (IP) protection, and global supply chain management, RideAware proactively engages with external experts to ensure technical precision, legal robustness, and long-term commercial success. We have established a strong advisory network that strengthens our operational foundation and helps us mitigate early-stage hardware risks while scaling our technology responsibly.

On the **legal side**, our advisors provide critical support in navigating patent filing, intellectual property law, and contract negotiation with international hardware suppliers. This is particularly relevant as we secure the proprietary rights to our Augmented Reality (AR) interface and Heads-Up Display (HUD) integration. Their expertise ensures that all business activities, from manufacturing agreements to consumer safety compliance, align with European (CE) standards and international electronic regulations.

2. Company Description

On the **financial side**, our advisors bring deep expertise in technology start-up finance, venture capital readiness, and R&D tax strategy. They support us in refining our financial models to manage the capital-intensive nature of hardware development, ensuring transparency in our reporting and readiness for our **€ 100000 seed investment round**. Specifically, they assist in maximising the **Irish R&D Tax Credit (30%)**, which is vital for reinvesting in our technical roadmap. To further strengthen our core offering, we also benefit from expert input in the areas of **product development and human safety**. We collaborate with the **DCU Sensor Technology Department** to fine-tune our bone-conduction audio and sensor calibration, ensuring high-quality standards across the product lifecycle. Complementing this, our advisors in **Human-Computer Interaction (HCI)** ensure that our AR display is optimised for rider safety, preventing cognitive overload and maintaining the "Eyes-Forward" mission that defines the RideAware experience.

Dr. Hyowon Lee
Glasnevin Campus, DCU
hyowon.lee@dcu.ie
Hyowon advises RideAware on AR technology infrastructure, in addition to best manufacturing practices.

Dr. Derek Molloy
Glasnevin Campus, DCU
derek.molloy@dcu.ie
Derek advises RideAware on AR systems, software engineering, and human-computer interaction.

Murgitroyd (Legal Advisor)
57 Adelaide Road, Dublin Ireland
+353 (1) 661 3930
Murgitroyd advises RideAware on patent and copyright law to secure brand assets.

Dr. Healy Graham
Glasnevin Campus, DCI
grahan.healy@dcu.ie
Graham advises on brain-computer interfaces and eye-tracking interfaces within the AR technology infrastructure.

THE PROBLEM

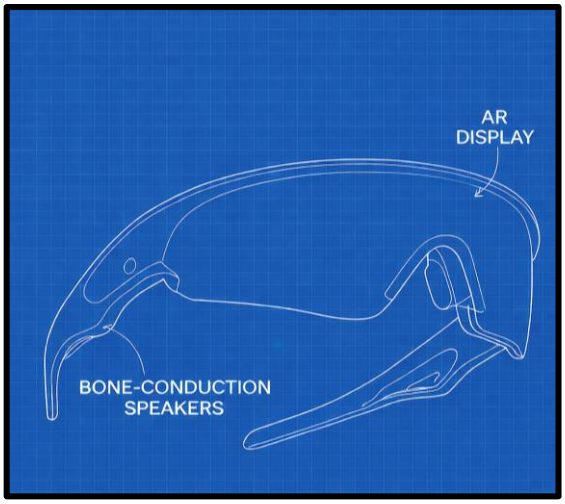
Modern urban cycling is hindered by a fundamental conflict between navigation and focus safety. As cities grow more complex, cyclists are forced to rely on tools that were never designed for the high-stakes environment of a moving bike. This creates a "High-Friction" experience where technology often becomes a dangerous distraction rather than a helpful assistant.

The "Cost of a Glance" is a critical problem in cycling safety is visual distraction. At average city cycling speeds, looking down at a phone mount or a handlebar-mounted computer for just two seconds means traveling **14 metres completely blind**. (Driving Theory, 2024; Useche *et al.*, 2018). This repetitive "glancing" behavior significantly increases the risk of collisions and near-misses in heavy traffic.

2. Company Description

OUR INNOVATION

RideAware is not just another wearable technology brand; it is a game-changer in the urban mobility industry. What makes us truly innovative is the powerful synergy of a heads-up AR navigation interface, integrated bone-conduction safety audio, and adaptive photochromic lens technology.
While each of these elements exists in isolation elsewhere, such as in standalone bike computers or standard sports audio, no competitor currently combines them into a seamless, safety-driven experience like we do. We don't just sell cycling eyewear; we deliver situational awareness, seamless navigation, all-weather protection, and high-tech connectivity in one unified product. That's not just innovative; it's necessary for the safety of the modern cyclist.



UNIQUE SELLING POINTS

RideAware's defining feature is its "Eyes-Forward" AR interface, which sets it apart from traditional bike computers or phone mounts by allowing the rider to navigate without ever looking down. Our bone-conduction technology further enhances safety by maintaining 100% situational awareness of ambient traffic. The combination of protective eyewear and a navigational assistant differentiates RideAware as the only "all-in-one" wearable safety solution for the modern cyclist

BENEFITS AND FEATURE

1. Heads-Up AR Navigation To combat the RideAware projects navigational cues directly into the rider's field of vision, ensuring eyes stay on the road at all times.

2. Open-Ear Situational Awareness In response to the dangers of blocking traffic noise with traditional earbuds, our integrated bone-conduction speakers deliver clear audio alerts while keeping the ears open to sirens and surrounding vehicles.

3. Seamless Ecosystem Integration Recognising the friction of switching between devices, our hardware acts as a navigational assistant that syncs with existing routing tools, providing a single, intelligent interface that integrates technology into the ride rather than interrupting it.

2. Company Description

RideAware
See Beyond

MISSION AND VISION

To enhance the cycling experience through intelligent, heads-up navigation.
Vision We believe technology shouldn't interrupt your journey; it should integrate into it. RideAware strives to lead the global shift toward "Eyes-Forward" urban mobility, ensuring every cyclist can navigate busy environments with total confidence and safety. By combining cutting-edge AR innovation with situational awareness, we aim to set a new standard for smart wearables, where every ride is safer, smoother, and more intuitive.

WEAK POINTS

Despite its groundbreaking technology, RideAware faces certain challenges, particularly its **price point** resulting from the integration of premium AR optics, bone-conduction audio, and specialised sensors. This may limit its initial appeal to price-sensitive casual cyclists, positioning the product primarily in the mid-to-high-end tech segment. As a **new entrant** in the highly competitive wearables and cycling accessories market, RideAware must also establish technical credibility and brand trust against established giants like Garmin or Apple. Additionally, the **reliance on smartphone connectivity** and app-syncing might be perceived as a barrier by users seeking a completely standalone device or those concerned with mobile battery drainage during long rides.

FUTURE DEVELOPMENT

Looking ahead, RideAware will expand beyond its initial B2C focus to explore **business-to-business (B2B) opportunities**, particularly within the rapidly growing urban delivery sector. The rise of last-mile logistics, driven by platforms such as food and parcel delivery services, has created a large segment of **professional cyclists who operate in high-risk, time-sensitive urban environments**. These riders face an even greater exposure to navigation-related distraction due to constant route changes and time pressure.
By targeting delivery companies and fleet operators, RideAware can position its AR glasses as a **professional safety and efficiency tool**, rather than solely a consumer wearable. From a commercial perspective, a B2B model introduces several strategic advantages.

OBJECTIVES AND TIMELINE

YEAR 1-2: Market Entry and Brand Establishment
During the first two years, RideAware aims to launch its intelligent AR cycling glasses in the Irish and UK markets via a dual-channel (DTC and specialised retail) model, establishing itself as the premier "safety-first" wearable brand for urban commuters.
Brand Establishment & Market Penetration: Achieve an initial market penetration of 0.1% within the tech-savvy commuter segment in Dublin and London, securing 1,500 unit sales by Year 2 and generating an annual revenue of approximately **€340,000**.

2. Company Description

RideAware
See Beyond

OBJECTIVES AND TIMELINE

Strategic Partnerships & Safety Certification: Secure integration partnerships with at least two major navigation platforms (e.g., **Strava and Komoot**) to enhance user experience. Obtain necessary **CE and ANSI Z87.1 safety certifications** to validate lens impact resistance and electronic compliance.

Marketing & Distribution: Implement high-impact digital marketing campaigns utilising cycling influencers and "Vision Zero" safety advocates. Launch on **Amazon FBA** to enable scalable fulfilment across Europe.
Product Development & Feedback: Utilise customer data from the MVP launch to refine the AR interface and initiate R&D for **Phase 2**, focusing on battery optimisation and frame weight reduction.

YEAR 3-5: Expansion and Diversification
During Years 3 to 5, RideAware will focus on scaling into the wider European market, diversifying the product line, and evolving into a comprehensive safety ecosystem.

Revenue Growth & Market Leadership: Reach a total of 10,000 active users by Year 5, with annual revenue scaling to **€2.1 million**. Maintain a steady **EBITDA margin of 19.5%** through manufacturing efficiencies.
Product Line & Technical Expansion: Introduce **prescription-compatible AR frames** and specialised "Sport" variants for long-distance performance cyclists. Evolve the hardware to include **V2X (Vehicle-to-Everything) sensors** for real-time hazard alerts.
Social Impact & Advocacy: Partner with city councils and urban planners to integrate RideAware data into "Smart City" safety initiatives, aiming to reduce cycling-related navigation accidents by 50% among our user base.
Digital Presence & Ecosystem: Launch a premium subscription tier within the RideAware App for advanced performance analytics and community-driven "Safe-Route" mapping. Continuously refine hardware based on the **SWOT analysis** to mitigate emerging competition from big-tech entrants.

SWOT

S

First-Mover Advantage:
Category leader in AR-specific cycling navigation, technical lead over traditional bran
Integrated Safety Ecosystem: synergy of heads-up AR visuals & bone-conduction audio
All-Weather Versatility: High-performance photochromic lens technology

W

New Brand Status: Startup nature requires significant effort to build market trust against established tech giants.
Technical Dependency: Reliance on smartphone Bluetooth and app-syncing creates a potential point of hardware failure.

O

Booming AR Market: Rapid global growth

Urban Mobility Trends : Future Potential Vision Zero, expanding cycling infrastructure

V2X Expansion: Future Potential to integrate with SMART CITY networks for predictive Hazard alert

T

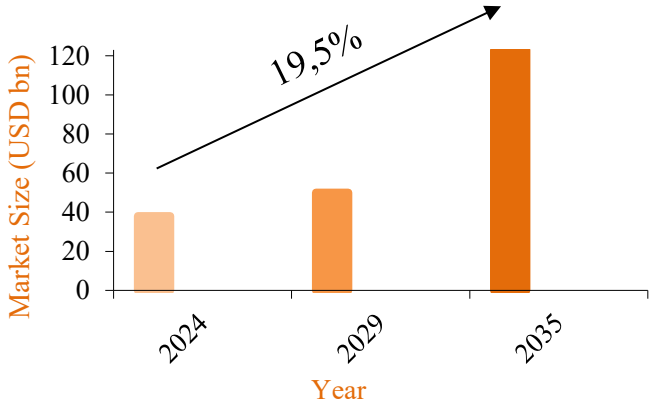
Big Tech Entrants: Potential competition from giants like Meta, Apple, or Oakley with massive R&D budgets.
•**Economic Volatility:**
Rapid Obsolescence: Fast-paced development in sensor tech requires continuous, high-cost R&D to stay relevant.

3. Market Analysis

MARKET OVERVIEW AND GROWTH

AR & Smart Wearables

The global wearables market is expected to reach USD 50B by 2029, growing at a CAGR of 19.5% up to 2035, driven by rising demand for integrated smart wearables (Euromonitor International, 2025; Future Market Insights, 2025). Smart wearables are expanding into new form factors such as smart glasses, with global AR eyewear shipments projected to reach 14.13 million units by 2025 (IDC, 2025). Products such as the Meta Ray-Ban demonstrate increasing consumer acceptance of AR-enabled eyewear.



Smart Cycling Technology Market

The global bicycle safety technology market is expected to grow from USD 2.47B in 2024 to USD 6.05B by 2033 at a CAGR of 10.2% (Market Research Future, 2024), driven by urbanisation, rising health awareness, and pro-cycling policies. Increasing adoption of IoT devices and connected wearables strengthens demand for hands-free, real-time navigation, creating favourable conditions for AR solutions like RideAware. European subsidies and infrastructure investments further boost demand for premium navigation wearables.

Navigation & Safety Market

The navigation and mapping devices market, dominated by bike computers from Garmin, Wahoo, and Hammerhead alongside smartphone-based systems, continues to grow. Safety remains a major behavioural driver, with accident risk in low visibility conditions fuelling demand for smart, visibility-enhancing accessories (Fact.MR, 2025).

TARGET MARKET

RideAware identifies three primary customer segments: Safety-Driven Urban Commuters, Performance-Oriented Recreational Riders, and Tech-Savvy Urban Mobility Users, with urban commuters representing the primary target for initial market entry.

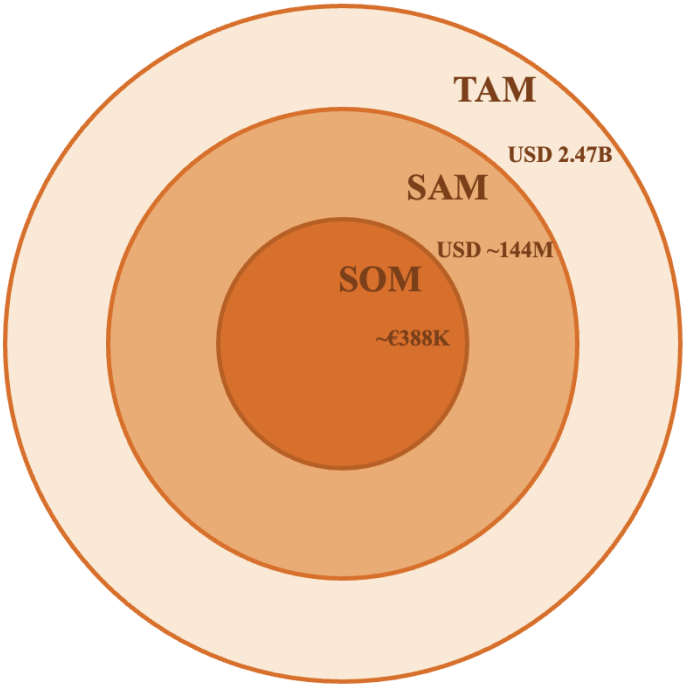
Total Addressable Market (TAM)

The TAM encompasses all European cyclists and micro-mobility users who rely on digital navigation tools. E-bike sales across Europe reached approximately 5.1 million units in 2023, with electric bicycles now accounting for the majority of bicycle sales by value in leading EU markets such as Germany, the Netherlands, and Belgium (CONEBI, 2024). The European bicycle market overall was valued at USD 24.46 billion in 2024 (Market Data Forecast, 2026). Most relevant to RideAware, the global bicycle safety technology market was valued at USD 2.47 billion in 2024 and is forecast to reach USD 6.05 billion by 2033 at a CAGR of 10.2% (Market Research Future, 2024), driven by urbanisation, rising health awareness, and pro-cycling infrastructure investment across the EU (CONEBI, 2025).

3. Market Analysis

Serviceable Available Market (SAM)
The SAM focuses on European cyclists who actively use digital navigation and show willingness to adopt premium technology, including urban commuters in cities such as Dublin, Berlin, and Amsterdam, road cyclists, and the fast-growing e-bike community (CONEBI, 2023). Focusing on the cycling-specific subset, RideAware estimates its SAM at approximately USD 50-70 million across Europe.

Serviceable Obtainable Market (SOM)
The SOM reflects RideAware's early-market reach among tech-affine early adopters and urban commuters in Ireland, consistent with innovation diffusion theory (Rogers, 2003). Based on a Year 1 forecast of 2,000 units at €194, projected revenue stands at approximately €388,000. Expansion into the DACH region and subsequently the UK represents RideAware's next growth phase.



RideAware Market Sizing: TAM, SAM & SOM

TARGET SHARE

RideAware's targeted market share reflects a deliberately conservative early-adopter strategy consistent with innovation diffusion theory (Rogers, 2003). Based on a Year 1 sales forecast of 2,000 units at €194, projected revenue stands at approximately €388,000, representing well under 1% of the European smart cycling technology SAM. By Year 3, with planned expansion into the DACH region, the base-case revenue projection reaches €655,720 at a CAGR of 30%. This phased approach prioritises building consumer trust and brand credibility before pursuing volume growth, reflecting the realities of hardware startup scaling in a nascent product category.

MARKET TRENDS

The cycling technology market is undergoing significant change, driven by rising safety awareness, shifting mobility habits, and accelerating adoption of wearable technology. These trends align with RideAware's product offering, making this the right time to bring navigation-first AR glasses to market.

Rising Cycling Participation
Cycling use across Europe increased by 5% year-on-year in the first half of 2025 (Eco-Counter, 2025). The broader European e-bike market remains substantial, with Germany alone selling approximately 2.05 million e-bikes in 2024 and around 2 million in 2025, making it Europe's largest e-bike market by volume (ZIV, 2025; ZIV, 2026). Ireland's National Cycle Network accelerates this shift, envisaging 3,500 km of cycling corridors with a €677 million budget (Eco-Counter, 2025).

Implication: A growing cyclist population means a growing addressable market, with more riders seeking smart, connected accessories.

Safety as a Purchase Driver
Distraction from phones and bike computers is increasingly identified as a leading cause of cycling accidents (DEKRA, 2023). Over half of adults in Ireland cite safety concerns as a barrier to cycling more frequently (RedClick, 2025). This is driving demand for hands-free, eyes-forward navigation solutions that keep riders focused on the road.

Implication: Safety is no longer a niche concern. RideAware's core proposition addresses this, positioning it as a solution to a problem cyclists are already aware of.

Mainstream Adoption of AR Wearables
Consumer resistance to head-worn technology is falling rapidly. The commercial success of products such as the Meta Ray-Ban demonstrates that AR-enabled eyewear is crossing into everyday use (Omdia, 2025).

Global AR eyewear shipments are projected to reach 14.13 million units by 2025, with smart glasses growing at a CAGR of 29.4% (IDC, 2025; MarketsandMarkets, 2024).

Implication: RideAware enters the market at a moment when consumers are already warming to the idea of wearable AR, which reduces the educational burden and adoption friction the category faced just two years ago.

14.13M

AR eyewear units projected by 2025

(IDC, 2025)

Future Outlook
Looking ahead, several structural forces will continue to drive demand:

- Continued EU infrastructure investment in cycling as part of broader sustainable mobility agendas
- Growing regulation around distracted cycling, particularly in urban areas
- Expansion of the e-bike segment into older, less tech-native demographics who increasingly need navigation support

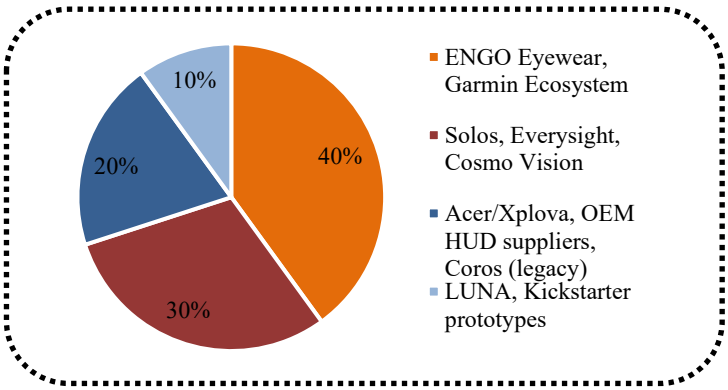
Integration of AI and real-time hazard detection into cycling wearables as the next product generation.
These trends collectively point to a market that is growing in size, maturing in consumer readiness, and increasingly aligned with what RideAware offers.

BENEFITS TO CLIENTS

RideAware delivers clear, measurable benefits across its three core customer segments. For urban commuters, the glasses eliminate the need to look down at a phone or bike computer, reducing distraction and accident risk while lowering mental load in heavy traffic. For performance cyclists, seamless turn-by-turn AR navigation allows riders to maintain focus and rhythm on unfamiliar routes without interrupting their ride flow. For tech-savvy urban riders, RideAware replaces multiple accessories, sunglasses, navigation device, and audio device, with a single, lightweight product that integrates with existing apps such as Strava and Komoot. Across all segments, photochromic lenses, weather-resistant hardware, and bone-conduction audio ensure usability in all conditions, while an accessible price point of €194 makes smart AR navigation available beyond the premium-only market.

COMPETITIVE LANDSCAPE IN EUROPE

The European smart cycling technology market can be grouped into four segments: Market Leaders, Runner-Up Brands, Medium-Sized Players, and Minor Players, reflecting differences in market maturity and technological capability within the emerging AR eyewear segment.



Estimated Competitive Segments in the AR Cycling Glasses Market.

Market Leader

ENGO is Europe's leading specialist in AR-enhanced cycling glasses, widely adopted by road cyclists and triathletes. Its leadership is solidified by heads-up display technology, ANT+ and Garmin connectivity, and strong partnerships in performance cycling. Although Garmin no longer offers the Varia Vision headset, its broader ecosystem which included Edge computers, Varia radar, and smart lighting dominates the cycling technology market, setting the benchmark for integration, data reliability, and user expectations.

Runner-Up Brands

Runner-up brands include Solos, Everysight, Cosmo Vision, and Julbo. Solos offers lightweight HUD displays with voice assistance but has limited European market penetration. Everysight's Maverick glasses, featuring Strava and Garmin integration, represent a strengthening competitor in the performance segment. Cosmo Vision targets urban cyclists with hybrid AR navigation features, making it one of the closest functional comparisons for RideAware. Julbo's EVAD-2, retailing at €499 with photochromic lenses and ActiveLook AR technology, is among the most directly comparable European products currently available (Bikerumor, 2021).

Medium-Sized Players

Medium-sized players include Xplova/Acer, OptoTech, and other OEM HUD manufacturers. Xplova/Acer has experimented with AR cycling prototypes, though their presence remains stronger in Asia. OptoTech and various OEM suppliers shape the market indirectly by providing AR modules and HUD components, lowering entry barriers for new entrants.

Minor Players

Minor players include LUNA Smart Cycling Glasses, low-cost OEM smart glasses from Shenzhen, and emerging crowdfunded concepts. Cybersight's Guardian glasses raised over £325,000 on Kickstarter in early 2025, signalling rising consumer demand for affordable HUD cycling glasses (road.cc, 2026). These players compete primarily on price and lack the ecosystem integration or production stability of established brands.

Conclusion

The competitive landscape is fragmented, with ENGO and Garmin shaping high-performance standards while other players test early AR concepts. There is, however, a clear gap for simple, navigation-first AR glasses tailored for everyday commuter and road cyclists. By focusing on intuitive, distraction-free navigation at an accessible price point, RideAware can address this gap and establish a distinct market position in the evolving cycling technology market.

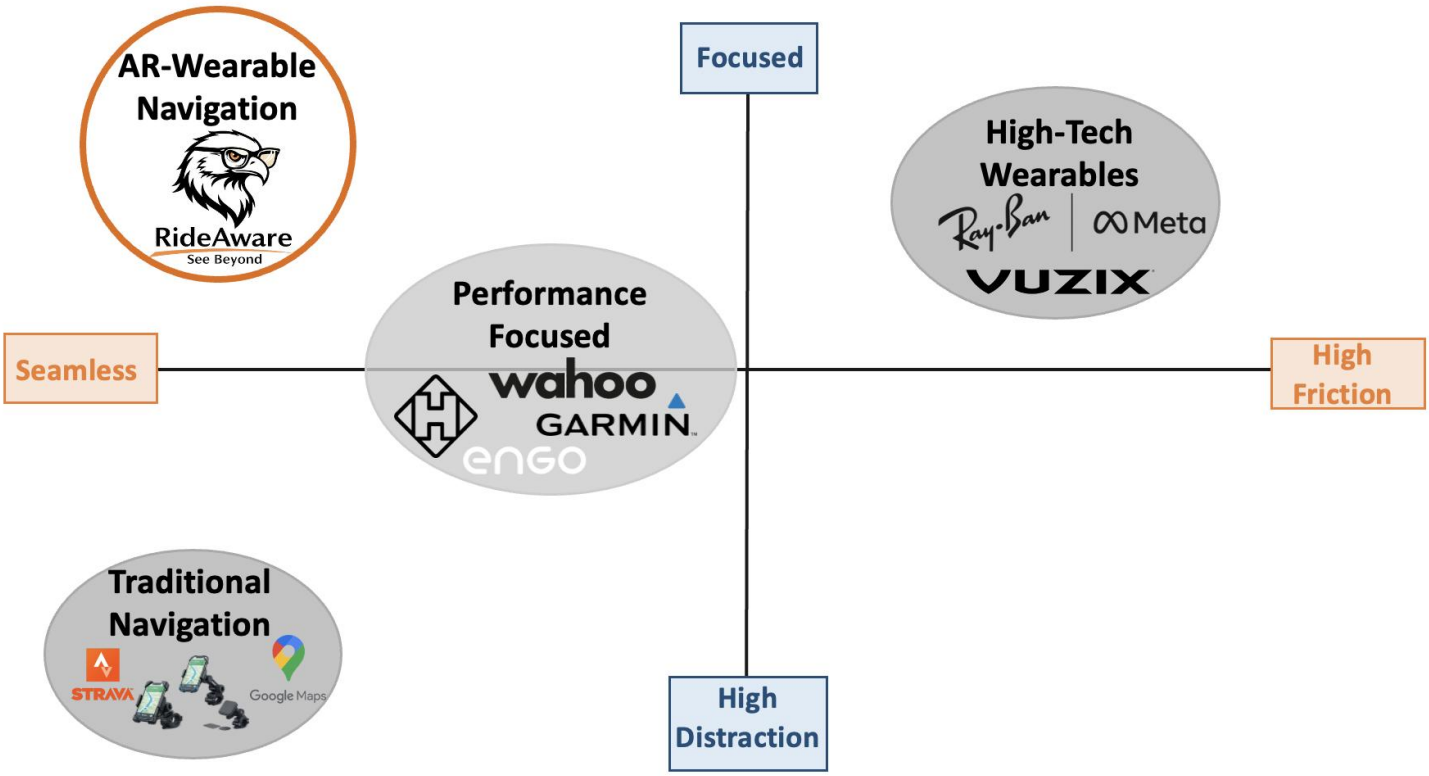
3. Market Analysis

TARGET SHARE

RideAware's targeted market share reflects a deliberately conservative early-adopter strategy consistent with innovation diffusion theory (Rogers, 2003). Based on a Year 1 sales forecast of 2,000 units at €194, projected revenue stands at approximately €388,000, representing well under 1% of the European smart cycling technology SAM. By Year 3, with planned expansion into the DACH region, the base-case revenue projection reaches €655,720 at a CAGR of 30%. This phased approach prioritises building consumer trust and brand credibility before pursuing volume growth, reflecting the realities of hardware startup scaling in a nascent product category.

COMPETITIVE ADVANTAGE

RideAware's core competitive advantage lies in combining navigation-first AR functionality with everyday usability at an accessible price point. RideAware outperforms competitors on Ease of Use, Navigation Performance, and Riding Confidence, while remaining significantly more affordable than established players such as ENGO and Julbo. By targeting the underserved gap between high-tech wearables and traditional navigation tools, RideAware delivers an all-in-one solution that replaces conventional sunglasses, a navigation device, and an audio accessory, tailored for the everyday cyclist.



Competitive Positioning Map: AR Cycling Navigation Market

4. Marketing & Sales Strategy

Marketing Strategy

Marketing Segmentation:
Across the SOM, RideAware will be targeting three primary segments. These three segments include: urban commuters, performance, cyclists, and tech-savvy urban cyclists. The urban commuters will act as the core target segment since this group has high navigation needs due to their daily commutes and travels around the city. Although still important to a lesser degree, performance cyclists will be important as they are driven by efficiency and practicality. Lastly, the Tech-savvy users will be an important segment since they are driven by innovation and convenience. This segmentation is aligned with the customer research conducted during the feasibility testing, showing strong demand across these three groups.

Reaching the Full Target Market
In order to reach the full target market, marketing will employ a multi-channel approach designed to enhance reach. This approach will combine social media marketing, influencer campaigns, and physical retail stores. To create awareness online, influencer marketing will be leveraged through social media platforms like Instagram, Facebook, and TikTok. In addition, to ensure a hands-on experience for customers is created, retail partnerships with bike shops and pop-up organisers will facilitate this. Through this multi-channel model, broader reach should be attained, along with more effective customer conversion.

Product Differentiation:
The RideAware glasses contain several key differentiation elements that enable the product to stand out from other competitors on the market. Firstly, there is no existing product in this market segment that seamlessly meshes hands-free AR navigation, sporty light-weight design, and seamless integration into a user's field of vision. The RideAware glasses differ from traditional navigation tools since they eliminate the need to check your phone when riding. It also distinguishes itself from more performance and tech-heavy products, such as cycling computers or VR smart glasses, since the RideAware glasses are based on simplicity, safety, and ease of use.

Key Benefits to be Showcased

- *Enhanced Navigation Efficiency*

The glasses removes many of the hassles associated with traditional navigation alternatives like hand-held maps or handlebar phone mounts.

- *Reduced Distraction*

Through RideAware's turn-by-turn AR navigation technology, typical navigation distractions become a thing of the past, allowing cyclists to focus on the ride.

- *More Focused Ride*

Despite visual AR cues appearing in a cyclist's field of vision, the arrows appear on the user's peripheral vision and are non-intrusive, allowing for a more focused ride.

- *Multifunctional Eyewear*

The RideAware glasses can be utilised in various contexts due to their versatile design, photochromic lenses, and IP67 water resistance rating.

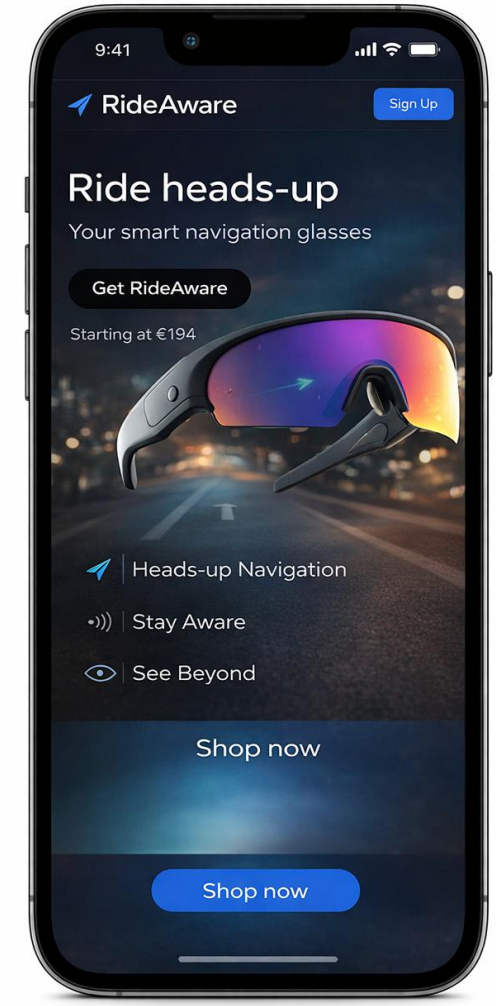
4. Marketing & Sales Strategy

Potential Customers:
Some of the potential customers that RideAware has targeted within the Dublin area include commuters, delivery drivers, and cycling enthusiasts. These are target groups within the city of Dublin that have shown great potential in becoming early adopters for the RideAware glasses due to their frequent navigation needs and openness to new technologies. The DCU university networks, in addition to cycling communities and forums in Ireland have been crucial customer pipelines that have helped validate initial demand.

RideAware Website & Feedback:
Initial testing will take place in Dublin as this will be the primary market the RideAware glasses will be targeted to after the validation stage. In addition to this, Dublin is also a great location to collect feedback on the product as it has strong cycling infrastructure and a growing number of urban commuters (Dublin City Council, 2023). Feedback on the glasses will be collected through physical interactions at pop-events, pilot user experiences, and early adopters that will share their experience online through our amazon store or social channels. To ensure the product meets customer needs and expectations, the feedback that is collected will be used to make the necessary product changes or refinements.

Market Awareness Contacts:
RideAware will aim to create market awareness by leveraging different partnerships and resources at its disposal.

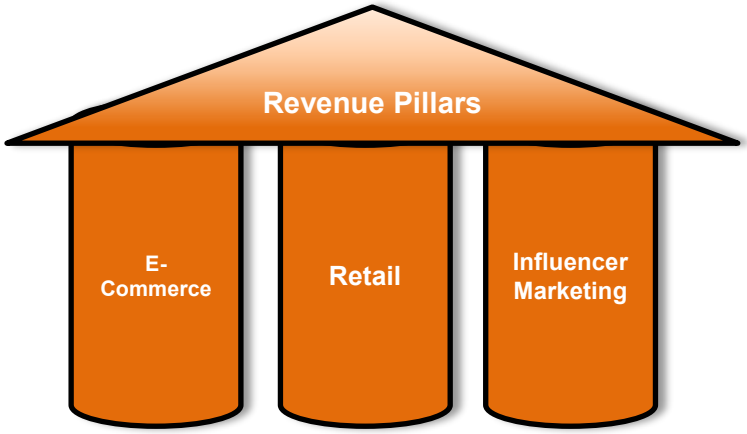
RideAware Mobile Website



Firstly, RideAware will utilize cycling clubs as a way to expand market reach through a more informal channel. Secondly, contacts within university clubs will also help drive early market awareness within student cyclist groups. Lastly, the company will leverage its relationships with influencers in the health and wellness space, particularly those that produce content that directly relates to cycling. Any additional exposure will be derived from lifestyle and tech media contacts, allowing RideAware to be positioned within both the cycling and broader smart wearables markets.

REVENUE SOURCES

Income Source Summary:
RideAware will use a multi-channel revenue model designed to balance reach, brand control, and customer trust. At launch, the business will generate revenue primarily through direct online sales via its branded Shopify store, supported by supplementary distribution through Amazon FBA. In addition, retail sales will be driven by bike shop partnerships across Dublin. Lastly, influencer-led advertising will form a third pillar of the revenue model by creating awareness through social platforms. These three channels will allow RideAware to scale efficiently while maintaining a credible and customer-focused route to market



E-Commerce
RideAware's primary e-commerce channel will be its branded Shopify web store, offering strong control over pricing, customer experience, and brand presentation. Shopify will provide access to customer insights and analytics while supporting long-term digital marketing and customer service functions (Shopify, 2025). To complement this, RideAware will use Amazon FBA as a secondary channel for a smaller batch of stock. Although FBA involves higher storage fees and less flexibility, it provides access to Prime customers, rapid shipping, and a wider logistics infrastructure, helping RideAware improve visibility and gauge online demand efficiently (Griffin, 2025)

Retail
Alongside its online channels, RideAware will generate revenue through partnering with select specialist bike shops across Dublin. This offline channel is important because the product's high-tech nature means that physical presence can reduce adoption friction and build consumer trust. This sales component will begin with a small number of independent bike shops that will stock the glasses in exchange for a 10–15% share of profit margin. Although this creates a short-run profitability trade-off, it improves credibility, increases local visibility, and provides customers with access to fitting, calibration, and after-sales support through trusted retail partners.

Influencer Marketing:
Influencer marketing will act as the third pillar of RideAware's revenue model by driving awareness-led conversions across Instagram, TikTok, and YouTube. This will involve micro-influencer campaigns where creators document an "Unbox to Commute" journey and produce POV content showing the contrast between phone-based navigation and AR-guided riding. This approach is commercially relevant because influencer recommendations are often trusted more than traditional advertising, helping convert skeptical commuters into first-time buyers (Kumari, 2025). By combining macro reach with micro-level authenticity, RideAware can expand visibility, generate quality traffic, and support measurable product sales through social proof (Lugo, 2023).

4. Marketing & Sales Strategy

RideAware
See Beyond

SALES STRATEGY

Direct to Consumer (Shopify & Amazon FBA)

Costs Involved:

Shopify setup, web development, digital advertising, Amazon FBA fees, 3PL fulfillment fees, customer service, and ongoing website management.

Efficiency of Market Reach:

Achieves high efficiency when paired with effective marketing campaigns. Amazon's existing user infrastructure enhances visibility.

Control over pricing and positioning:

Full autonomy over pricing, branding, and customer experience on Shopify. Amazon algorithms and competition may influence visibility.

Logistics:

Orders will be held in an EU 3PL, will then be shipped direct to Shopify customers, and in batched to FBA fulfillment centres.

Integration with marketing strategy:

Supports social campaigns, SEO, customer analytics, brand storytelling, and long-term digital relationship building.

Benefits:

Scalable, brand-controlled sales channels with fast fulfilment and direct access to customer feedback.

Direct to Consumer

Retail Partnerships (Dublin Bike Shops)

Costs Involved:

10-15% of profit margin.

Efficiency of Market Reach:

Effective for local visibility and trust-building, but narrower in reach than digital channels.

Control over pricing and positioning:

Moderate control: RideAware sets pricing and standards, but in-store presentation will depend on the retailer.

Logistics:

Inventory held in an EU 3PL and then shipped to bike shops directly.

Integration with marketing strategy:

Supports demos, product trials, and word-of-mouth marketing.

Benefits:

Builds credibility, reduces adoption friction, and provides fitting, calibration, and after-sales support.

Influencer Marketing

Costs Involved:

Influencer fee, gifted products, campaign management of different influencer tiers.

Efficiency of Market Reach:

Highly effective for reaching commuters and cyclists through trusted creators on TikTok, YouTube, and Instagram.

Control over pricing and positioning:

Strong message control through creator briefs, though tone and audience reaction remain partly outside RideAware's control.

Logistics:

Influencers drive discovery; conversions then flow through RideAware's DTC channels and campaign sign-up pathways.

Integration with marketing strategy:

Central to POV storytelling, commuter proof, launch awareness, and social validation of the product's value.

Benefits:

Expands reach, builds trust, generates reusable content, and converts hesitant buyers through authentic commuting proof.

RideAware©

PRICING

RideAware's Pricing
RideAware will launch at €194 per pair, based on an estimated unit cost of €149. The 30% markup keeps the product premium, commercially viable, and accessible to early adopters.

Competitor Pricing
Traditional Navigation Competitors:
Traditional navigation alternatives are far cheaper than RideAware. Google Maps is widely available as a navigation app, Strava's paid plan starts at €9.99 monthly or €59.99 annually, and handlebar mounts start at approximately €39.99 (Strava, 2025). However, these tools still rely on phones or bar-mounted screens, so they do not eliminate downward glances and distractions in the same way that RideAware does.

Performance-Focused Competitors:
Performance-focused competitors set a higher standard but generally cost more than RideAware. The Garmin Edge 540 currently costs around €369–€400, while Wahoo's ELEMNT ROAM 3 is listed at €449.99 (Wahoo, 2026). ENGO's HUD eyewear sits at roughly €299.95 for the standard model and €329.95 for the photochromic version (Engo, 2026). At €194, RideAware enters the market at a significantly lower price while offering break-through wearable heads-up navigation.

High-Tech Competitors:
High-tech wearables sit well above RideAware's planned launch price. Ray-Ban Meta starts at €329, Oakley Meta HSTN starts at €439, and Oakley Meta Vanguard starts at €549 (Meta, 2026). Vuzix Blade 2 is listed at $799.99 (Vuzix, 2026). These products offer broader AI or smart-glasses functionality, but they differ to RideAware as they are not tightly positioned around simple, cycling-first navigation.

Level of Competition
The competitive landscape is fragmented. Garmin and ENGO set customer expectations in performance cycling, while Meta and Vuzix are key players in the broader smart-glasses category. Evidently, there is a clear gap in the market for a simple, navigation-first product that is aimed at commuters and everyday cyclists rather than high-income individuals or performance cyclists.

4. Marketing & Sales Strategy

Consumers' Quality-Price Perception

Our customer research suggested that the €194 price point is credible if the product can clearly deliver practical value. The customer interviews conducted suggested that willingness to pay ranged from €120–€180 for urban commuters, €180–€250 for performance riders, and €120–€200 for tech-savvy urban users. Interviewees valued hands-free navigation, weather-ready design, and reduced phone dependence, but remained sensitive to battery life, complexity, and durability. At this price, RideAware should be perceived as premium while remaining accessible relative to other market options.

Willingness to Pay

€120–€180

€200–€250

€120–€200

Production Costs and Overhead

Manufacturing

RideAware's manufacturing strategy is based on outsourced production to experienced wearable-tech partners, with Shenzhen identified as a cost-effective base for components and assembly. RideAware has identified Goertek as the preferred long-term manufacturing partner due to their expertise in optics, acoustics, software, moulding, and smart-glasses production, all of which support commercially viable AR frame development (Goertek,2026).

Goertek

Warehousing and Inventory Management

Warehousing and inventory management will depend on an EU-based third-party logistics firm that will house RideAware stock in bulk. This model reduces the need for fixed warehouse investment, supports Shopify fulfilment, wholesale shipments to bike shops, and batch shipments to Amazon. Using a reliable 3PL should also help meet customers' delivery expectations and ensure logistics costs remain predictable during launch and early growth.

Chain of Distribution and Added Value

RideAware's distribution chain will move products from the manufacturer's floors to an EU-based 3PL and will then be distributed across three routes: direct to consumer website orders, periodic Amazon FBA shipments, and wholesale supply to Dublin bike shop retail partners. With this model, value will be added at each stage. The 3PL will improve fulfilment efficiency, Shopify will strengthen brand control and customer data management, Amazon will expand visibility, and bike shops will provide trust, fitting support, and after-sales service for a product that greatly benefits from in-store presence.

RideAware's Distribution Chain

4. Marketing & Sales Strategy

Customer's Control of Pricing
Customers will not directly control the price of RideAware glasses, as pricing must remain consistent across channels to protect brand positioning and partner relationships. However, price flexibility is possible during limited time promotions throughout the year, such as launch discounts, demo-event codes, seasonal campaigns such as Black Friday, or bundled offers. These sales tactics would enable RideAware to stimulate demand without undermining the product's premium yet accessible positioning.

COMMUNICATIONS STRATEGY

Digital Advertising and Social Media
RideAware will use an organic and paid-amplified social media strategy across Instagram, TikTok, and Facebook channels. Short-form POV content, commuter storytelling, and creator-led proof will build awareness, communicate product benefits quickly, and drive traffic toward the website.

Public Relations and Media
Ongoing public relations and lifestyle-focused media outreach will support launch visibility. The company will build relationships with outlets covering active lifestyles, technology, and urban mobility, while pitching its commuter-safety and innovation story to publications such as The Irish Times and Silicon Republic.

Direct Marketing
Email campaigns will be employed to convert interest into sales and to strengthen retention. This would include waitlist updates, launch announcements, demo reminders, abandoned-cart prompts, and post-purchase onboarding (Mailchimp, 2025). Email is especially valuable because it supports relationship-building, segmentation, and repeat engagement between purchases (Mailchimp, 2025).

Website and E-Commerce Optimisation
RideAware's branded store will be optimised through search engine optimisation (SEO), landing-page refinement, and analytics-led improvements. Strong search visibility will increase monthly website traffic, while a clear product page, fast navigation, and focused calls to action will increase conversions from brand awareness to real purchases.

Sample Shopify branded Webpage

Community Engagement
Community engagement and word of mouth will be a crucial source of marketing and communications in the early stages. Through pop-up demos, cycling clubs, university outreach, commuter communities, and influencer platforms, RideAware will position the brand in a way to increase visibility. These activities will reduce adoption friction, create authentic product advocacy, and build local trust around a new wearable technology.

5. Advertising and Promotion

RideAware
See Beyond

Strategic Marketing Approach

To successfully penetrate the emerging AR cycling glasses market, RideAware adopts a strategic, rider-first marketing approach built around reducing adoption friction and building consumer trust in a novel product category. Rooted in the brand's core positioning as "The Better Alternative to Phone-Based Navigation", our marketing strategy is guided by three pillars:

01 Clear, Distraction-Free Navigation
AR cues directly in the rider's field of view and wind protection

02 Multifunctional Design
Combines navigation, sun protection

03 Affordable Smart Glasses
Accessible pricing and intuitive interface, easy to use for every age.

Guided by insights from our primary research, we developed a targeted marketing strategy tailored to three distinct customer segments: Safety-Driven Urban Commuters, Performance-Oriented Recreational Riders, and Tech-Savvy Urban Mobility Users. Each initiative is aligned with one or more of these segments, ensuring that our efforts resonate authentically with riders who value safety, efficiency, and seamless technology.

1. **Discovery** — Heads-Up Campaign
2. **Consideration** — Partnerships & Strava
3. **Trial** — Experience Labs
4. **Purchase** — Visionary Pilot
5. **Loyalty** — Focus Miles App

RideAware's Five-Initiative Customer Journey

Marketing Campaign 1

Heads-Up" Brand Awareness Campaign

Overview The "Heads-Up" campaign establishes RideAware as an essential tool for the Irish cycling ecosystem through an organic-led, paid-amplified strategy, keeping costs low while maximising reach.

Strategic Objective The Cost of a Glance", the cognitive load and danger caused by downward glances at phones while riding, through three messaging pillars: "Master the Maze", "Reclaim Your Focus", and "Be There Hassle Free.

Implementation Content centres on a "POV Contrast" series on Instagram and TikTok, contrasting the "Phone Rider" with the "RideAware Rider." Five to seven Irish cycling influencers will document their first week switching from phone mounts to RideAware through the "Commute Challenge." PR outreach will target The Irish Times and Silicon Republic through alignment with Vision Zero cycling safety initiatives.

Target Persona Urban cyclists in Dublin and Cork interested in cycling, tech, and safety gadgets, as well as commuters seeking to reduce cognitive load at complex city intersections.

Measures of Success in 2026/2027

Reach: Generate 500,000+ Impressions.

Engagement: Achieve a 5% Click-Through Rate (CTR).

Conversion: Secure 500 pre sign ups

5. Advertising and Promotion

Marketing Campaign 2

Valuable Partnerships Campaign

Overview RideAware's partnership strategy embeds the product into infrastructures urban commuters already rely on, removing friction from both the purchase and the riding experience.

Strategic Objective Position RideAware as the professional standard for urban commuters, transitioning the perception of the glasses from a gadget into an tool for efficiency and safety.

Implementation RideAware will register as an approved supplier under Ireland's Cycle to Work scheme, enabling subsidised purchases through employers. Alongside this, technical integration with Strava and Komoot will enable one-tap casting of routes directly to the AR HUD.

Target Persona Daily urban commuters aged 25-40 in Dublin's tech or finance sector, and tech-savvy recreational riders who value seamless app integration.

Measures of Success in 2026/2027

Scheme registration: RideAware approved as a Cycle to Work supplier by Q2 2026

Employer reach: 1–3 Dublin-based companies actively promoting RideAware through the scheme by Q4 2026

App integration: Strava and Komoot integration live by Q1 2027

Marketing Campaign 3

Pop-Up "Safety First Experience Labs

Overview To accelerate acceptance of an unfamiliar AR navigation product, RideAware will introduce mobile experience labs in major European cycling cities, where potential users can try the product in a controlled, risk-free environment.

Strategic Objective Target the consideration phase of the customer journey by enabling users to physically experience the product, translating abstract AR benefits into tangible proof and breaking down psychological adoption barriers.

Implementation Potential customers test the glasses on stationary smart bikes using AR simulators. In 2026, the focus is on cycling and technology trade fairs targeting early adopters. In 2027, the initiative expands to train stations, business districts, and university campuses across Dublin, London, and DACH cities. Following each demo, participants receive a QR code with an exclusive early-adopter discount.

Target Persona Tech-savvy urbanites and safety-conscious commuters who value reliability and want technology that promotes concentration rather than distraction.

Measures of Success in 2026/2027

Participation rate: Achieve at least 500 test drives per event location.

Lead generation: Convert 10% of testers into newsletter subscribers or pre-order customers on site.

Brand sentiment: Administer a five-question post-test survey per location; the goal is an 80% positive rating for user-friendliness.

5. Advertising and Promotion

Marketing Campaign 4

"The Visionary Pilot" Micro-Influencer Campaign

Overview RideAware will launch a campaign in which curated creators across TikTok, YouTube, and Instagram document their "Unbox to Commute" journey across four tiers, balancing maximum reach with community-level authenticity.

Strategic Objective Build credibility through authentic commuter storytelling, leveraging the finding that 63% of consumers trust influencer recommendations over brand advertising (Kumari, 2025).

Implementation
Influencers produce POV videos contrasting phone-checking with AR-guided navigation across four tiers, ranging from mega lifestyle creators driving broad awareness to bike couriers delivering street-level product proof.

Target Persona Urban commuters aged 20-40, targeted across all four tiers to build aspirational appeal and authentic everyday proof.

Measures of Success in 2026/2027

Engagement rate: Achieve an interaction rate of 4-6% for influencer posts.

Reach: Generate 500,000 impressions in the specific commuter niche.

Content volume: Produce a minimum of 40 original pieces of content across all tiers, generating reusable brand assets beyond the campaign period.

Marketing Campaign 5

Gamified Loyalty App - "Focus Miles"

Overview RideAware's companion app transforms everyday riding into a rewarding experience, shifting the brand from a one-time hardware purchase to a recurring relationship with its riders.

Strategic Objective Increase customer lifetime value and open new B2B revenue streams through a gamified loyalty loop grounded in Deterding's (2011) gamification framework.

Implementation Users earn "Focus Miles" for kilometres ridden using AR navigation, unlocking rewards such as lens upgrades or discounts on future models. Social leaderboards launch in Q4 2026, followed by a "Hazard Reporting" feature in Q1 2027, allowing riders to mark dangerous locations visible in real time on other users' HUDs. B2B integration with insurers and urban mobility partners follows in Q3 2027.

Target Persona Performance cyclists and early adopters drawn to gamification, as well as safety-conscious commuters who value community-driven hazard reporting.

Measures of Success in 2026/2027

Retention Rate: Achieve a 60-day retention rate of at least 55% of app users.

Community growth: Record at least 5,000 reported road hazards across Dublin, London, and DACH pilot cities in the first year after the feature is introduced.

Upsell rate: Achieve a 10% conversion rate for accessories or successor models through in-app offers, targeting 500+ users by end of 2026.

6. Research and Development

TECHNOLOGY ROADMAP

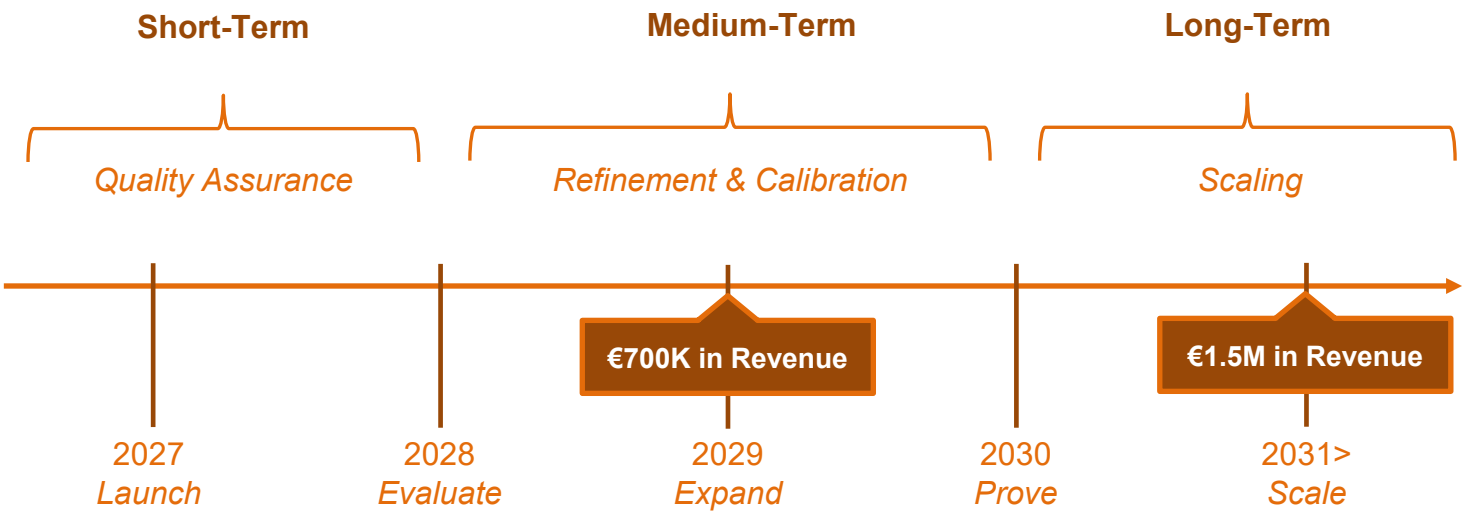
RideAware's technology development roadmap is designed to support long-term company growth through continuous improvement of its core wearable system. The focus is on reducing unit production costs while enhancing performance, usability, and reliability, ensuring that RideAware delivers a high-quality customer experience within the rapidly evolving smart-wearable technology market.

In the short term, RideAware's technology development will focus on resolving key limitations identified during technical feasibility analysis. Current AR waveguide displays can struggle with contrast and colour washout in bright outdoor conditions (Kim et al., 2022; Erickson et al., 2020). Additionally, BLE latency and signal jitter may delay navigation prompts (Tosi et al., 2017). Power consumption and thermal management also present challenges when integrating displays, audio, and connectivity in a lightweight frame. Addressing these issues is crucial for ensuring product reliability and minimal market adoption friction.

In the medium term, RideAware will focus on refining its product offering. This stage will focus on expanding the frame design portfolio beyond the initial MVP design to appeal to a broader set of customers. This will include the development of alternative styles better suited to female riders. R&D expenditure will be required to ensure existing technology can be effectively integrated into new form factors. Additionally, improvements in clip-on compatibility for prescription users will be explored to increase accessibility and product appeal.

In the long term, RideAware's technological development will support international scaling into broader European and North American markets. At this stage, R&D efforts will focus heavily on reducing unit production costs through design optimisation, improved component sourcing, and more efficient manufacturing processes. Lower production costs will enable competitive pricing while preserving margins, which is critical for scaling in consumer technology markets (Kenton, 2026). Additionally, technological refinements will aim to enhance durability, battery efficiency, and user experience, ensuring that RideAware remains both accessible and competitive as it expands globally.

Technological Roadmap:



RideAware©

RESEARCH AND DEVELOPMENT

RideAware's research and development strategy will be supported through close collaboration with its manufacturing partner, Goertek, which will also act as a central R&D partner. Leveraging Goertek's expertise in wearable technology, optics, and system integration will enable RideAware to continuously refine its core technologies and accelerate product development

Ongoing Commitment to R&D
RideAware is committed to ongoing R&D to ensure its product maintains a high level of technical excellence and user satisfaction. Building on the limitations identified in the previous section, the company will prioritise improvements in AR display visibility, BLE latency, and power and thermal efficiency to ensure reliable real-world performance (Kim et al., 2022; Tosi et al., 2017).

In addition, continuous R&D will focus on enhancing waterproofing capabilities, improving UV protection within lenses, extending battery life, and reducing overall product weight. These improvements are essential for maintaining a premium user experience and minimising adoption friction in a competitive wearable technology market.

Expected Contributions from R&D
RideAware's R&D efforts will be crucial for sustaining the company's growth and facilitating future scaling. Contributions from R&D expenditure will revolve around the following three core areas:

➢ *Enhanced Product Performance and Sustainability:*
Through sustained R&D efforts, RideAware aims to develop products that not only meet market expectations but exceed them. Continuous improvements in AR processing efficiency, battery optimisation, and material selection will allow the company to deliver high-performance wearable technology while also supporting more sustainable production practices and longer product lifecycles.

➢ *Reduction of Manufacturing Costs*:
Ongoing R&D efforts will eventually help the company reduce the production costs of the glasses as advancements in the technology will help produce a product of equivalent or better quality at a lower price, enabling economies of scale.

➢ *Enabling Future Innovation:*
Continuous technological improvements will create opportunities for future innovation and product expansion. For example, RideAware may explore integrating its AR navigation system into helmet visors, enabling entry into the motorcycle accessories market.

These contributions will enable RideAware to ensure sustained growth, while also meeting its mission of providing wearable navigation technology at a larger scale.

TECHNICAL PARTNERS

RideAware's product development relies on a network of specialised technical partners due to the complexity of integrating optics, electronics, and wearable design into a single device. Rather than developing all capabilities in-house, the company will adopt a partner-led model to reduce technical risk, accelerate time-to-market, and ensure access to proven expertise across the smart wearable technology value chain.

Main Partner: Goertek

Goertek will act as RideAware's primary technical partner. They are a global leader in the design and manufacturing of wearable technology and have extensive experience in optics, acoustics, software integration, and precision manufacturing, making it excellent for supporting RideAware's development (Goertek, 2026). As an original design manufacturer (ODM), Goertek will play a central role in refining the product architecture, integrating core components such as AR displays and audio systems, and scaling production for commercial launch.

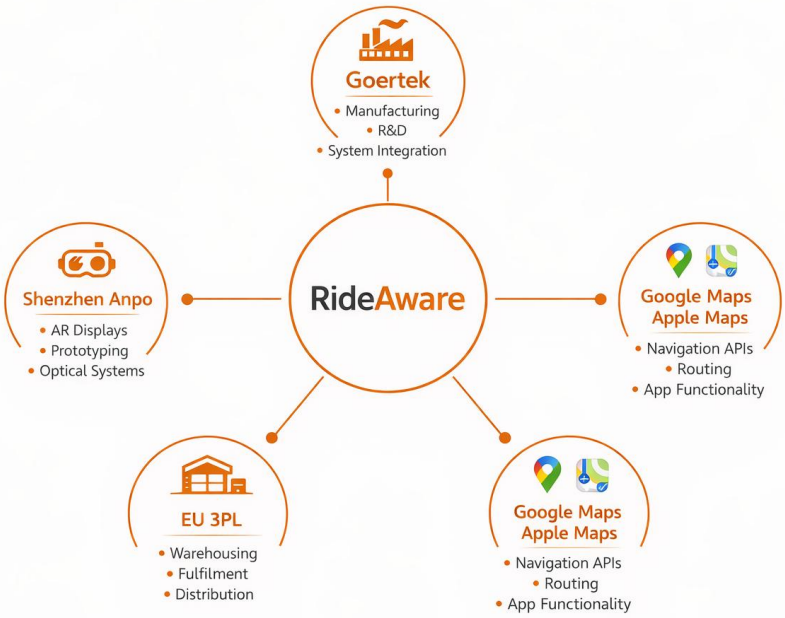
Goertek will also be a vital component of RideAware's long-term strategy as they will as both an R&D and manufacturing partner, supporting continuous cost optimisation and technological improvement.

Secondary Partner: Shenzhen Anpo Intelligence Technology

A key secondary partner is Shenzhen Anpo Intelligence Technology Co., which specialises in AR micro-display systems, particularly Liquid Crystal on Silicon (LCoS) technology (Enmesi, 2026). Shenzhen Anpo is better suited for early-stage development and prototyping, where flexibility and component-level expertise are critical.

Supporting Partners and Ecosystem

In addition to these core partners, RideAware will rely on a broader ecosystem of supporting partners. The first partner includes an EU-based third-party logistics (3PL) provider that will be responsible for inventory management, warehousing, and distribution. Additional partners include software platform providers such as Google and Apple that will provide mapping APIs to support routing and navigation functionality within the RideAware companion app. These partners will facilitate a lean internal structure while making valuable external capabilities accessible



Overall, RideAware's technical partner strategy is designed to support both initial feasibility and long-term scalability. By combining specialised prototyping partners with an experienced global manufacturer, the company is well positioned to deliver a high-quality product while managing risk and supporting future growth.

IP, PATENTS, COPYRIGHT AND BRANDS

Existing Patent Landscape
Many of the core components that will be incorporated into the RideAware glasses such as AR displays, Bluetooth Low Energy communication, and bone conduction audio already exist within established technological and intellectual property landscapes (Google Patents, 2026). Therefore, RideAware's innovation is more centred on the integration of these technologies to produce a novel user experience through a cycling-centred product as opposed to inventing entirely new technologies. For an early-stage startup, this is a realistic approach, as trademarks and related IP can often be more flexible and commercially useful than patents in the early phases of growth (Power and Reid, 2021).

Trademarks and Copyright
In contrast to patents, trademark and copyright protection will play a central role in RideAware's IP strategy. The company will seek trademark protection for the RideAware name, logo, and slogan "See Beyond", as trademarks are fundamental to building brand image, reputation, and consumer trust. Copyright protection will also be important for RideAware's website, app interface, promotional visuals, and other original digital assets. This is particularly relevant because mobile applications are multilayered products that may be protected through multiple forms of intellectual property, including copyright (WIPO, 2024)

Impact of IP on Brand image
RideAware's brand image can be significantly strengthened through the implementation of credible intellectual property protections. A tech startup that is serious about protecting their IP signals credibility, professionalism, and long-term commitment to quality. This is especially important for a new wearable technology brand, where gaining consumer trust is vital for securing initial user adoption. Trademarks are particularly important in this regard as they help consumers associate the product with a consistent standard of quality and experience, which reinforces loyalty over time (WIPO, 2024). For a new market entrant like RideAware, opting for a brand-based protection approach is more strategically valuable than relying solely on patents, especially where the competitive advantage comes from product design, usability, and customer experience (Power and Reid, 2021).

RideAware Logo and slogan

RideAware
See Beyond

7. Staffing and Operations

STAFF AND ORGANISATION STRUCTURE

Staffing and Operations

Team Overview
RideAware is led by a multidisciplinary founding team with expertise across technology, business strategy, marketing, and operations. This diverse set of skills provides a strong foundation for building an innovative mobility solution start-up company. Each team member has assumed a defined executive role, ensuring work is divided while maintaining accountability to ensure business success.
As a startup, RideAware uses cross-functional collaboration to maximise efficiency. The team's combined capabilities allow the business to manage product development with a go-to-market strategy. The team intends to take on only one additional member to ensure a lean core team to maintain flexibility and position the business to quickly adapt to any problems.

Organisational Structure
The organisational structure is designed to remain simple, agile, and functionally clear:

- **Chief Executive Officer (CEO)** – Strategic direction and leadership
- **Chief Technology Officer (CTO)** – Product development and innovation
- **Chief Operations Officer (COO)** – Supply chain and operational efficiency
- **Chief Marketing Officer (CMO)** – Branding and customer acquisition
- **Chief Financial Officer (CFO)** – Financial planning and funding strategy
- **Lead Software Developer** – App design and backend development

Key Roles and Responsibilities

Chief Executive Officer (CEO) - Juliana Dury

Juliana Dury acts as the Chief Executive Officer for RideAware. In charge of shaping RideAware's long-term vision and ensuring alignment across all business functions, she acts as leader of the executive team. Managing stakeholder management and strategic decision-making. Juliana acts as the public face of the company, representing RideAware in investor and industry engagements.

Chief Technology Officer (CTO) - Oliver Lopez
Oliver Lopez, the Chief Technical Officer, leads the development of RideAware's core product, our intelligent AR cycling glasses. His responsibilities include overseeing hardware integration (sensors, AR display, connectivity), software development, and product innovation. As RideAware continues to grow, his role will expand to overseeing potential new product lines, while continuing to innovate on RideAware's core product.

Chief Operations Officer (COO) - Aidan Mistry

Chief Operations Officer Aidan Mistry manages supply chain coordination, as well as manufacturing partnerships and logistics. This includes ensuring product quality, managing vendor relationships, and optimising operational processes. The COO acts as the main point of communication with both the manufacturing facilities and the third-party logistics company.

7. Staffing and Operations

STAFF AND ORGANISATION STRUCTURE

Chief Marketing Officer (CMO) - Madeleine Helber

RideAware's Chief Marketing Officer, Madeleine Helber, is responsible for brand positioning, marketing strategy, and customer acquisition. This includes managing social media campaigns, influencer partnerships, and digital marketing channels. As RideAware begins our planned marketing campaigns, Madeleine will take the lead in building brand awareness within the cycling community.

Chief Financial Officer (CFO) - Daniel Cino

Daniel Cino, our Chief Financial Officer, oversees budgeting, financial forecasting, and funding strategy. His responsibilities include managing cash flows, preparing financial projections, and supporting investor relations. Daniel ensures that RideAware maintains financial discipline as it continues to grow.

Lead Software Developer - Nabil Hussein

Nabil Hussein will be RideAware's Lead Software Developer, responsible for app design and backend infrastructure, allowing Apple and Google maps to be integrated with the RideAware glasses hardware. Nabil will remain on the team responsible for maintenance and any further software issues that may arise.

Future Staffing Strategy

After the initial six-person team, RideAware will operate without additional hires for the first 2 - 3 years. This approach allows the company to remain cost-efficient and avoid the fixed cost of salaries, while continuing to maintain full control over product development and strategic direction.
The small founding team allows the company to stay lean which enables:

- Faster decision-making
- Lower operational costs
- Greater alignment across departments

As the company scales, hiring decisions will be based on:

- Revenue growth
- Operational workload
- Market expansion needs

Future roles may include software engineers, marketing specialists, and customer support staff, introduced gradually to ensure sustainable growth.

Skills Gap Analysis

At the founding of the team, we issued a survey having each team member rank their competencies from 1-5. This survey was used to identify areas where the team lacks competencies. The following chart (next page) outlines the results of the survey. As shown, the team possesses strong capabilities across business and technology, but several areas have been identified for further development. The team's gaps exist in technological proficiency, product development and legal knowledge. In order to fill these gaps, RideAware will take the following actions.

SKILLS GAP ANALYSIS

Tech

The team is focused on strengthening its internal capabilities in technical proficiency and product development. To facilitate this, our CTO has expanded his knowledge of product technical specs immensely, and we additionally plan to partner with the company Goertek, a leading smart glasses manufacturer. By doing so, RideAware gains access to industry experience and quality assurance in production. To address the skills gap in software development, specifically building the app needed to sync mapping apps with the glasses, the team recruited Nabil Hussein, a computer science graduate, as lead developer in exchange for a 10% equity stake. This approach allows RideAware to fill critical technical gaps while conserving financial resources and continuing to build a well-rounded, capable team.

Law

In order to fill the gap related to law, RideAware plans to work with Murgitroyd, a multinational firm specialising in intellectual property law. With operations across Europe, the Americas, and Asia, and an office in Dublin. Murgitroyd can ensure proper protection and avoid infringement on existing smart glasses technologies; they can additionally support the filing of patents and trademarks while enabling future expansion across European markets. Their expertise ensures that RideAware's product, name, and branding are legally protected and compliant with existing regulations.

Customer Service

RideAware's customer service strategy focuses on digital communication channels, including company email and a live chat feature on its website, both managed by the team. The company aims to handle returns and replacements on a case-by-case basis to maintain high customer satisfaction. As products will also be sold through physical bike retailers, returns will be handled at these third-party stores in accordance with their individual return policies.

Name	Financial Literacy	Marketing Skills	Operations	Tech Proficiency	Product Development	Legal Knowledge	Leadership	Problem Solving	Time Management	Average Skill Level
Oliver CTO	3.00	2.00	4.00	4.00	3.00	1.00	4.00	4.00	3.00	**3.00**
Aidan COO	4.00	3.00	3.00	3.00	2.00	2.00	3.00	4.00	3.00	**3.00**
Madeline CMO	2.00	5.00	5.00	1.00	3.00	1.00	3.00	4.00	4.00	**3.11**
Juliana CEO	3.00	4.00	5.00	1.00	3.00	1.00	4.00	4.00	4.00	**3.22**
Daniel CFO	5.00	3.00	3.00	2.00	3.00	3.00	4.00	5.00	5.00	**3.67**
Skill Total	**17.00**	**17.00**	**20.00**	**11.00**	**13.00**	**8.00**	**18.00**	**21.00**	**19.00**	**16.00**

Skill Gap

OPERATIONS

Physical Infrastructure

RideAware's operational model is not dependent on a single physical location, allowing the company to operate internationally. Manufacturing is based in cost-efficient regions, while logistics hubs are located strategically to minimise delivery times and costs. This decentralised approach enables RideAware to optimise both production efficiency and avoid as many fixed costs as possible. By already having a team with no salary that is motivated by equity, the company can avoid further costs by limiting physical infrastructure associated with the business. For RideAware employees, the company intends to operate fully remotely, and in instances where in-person meetings are required, team members are able to meet at common locations.

To minimise expenditure and maintain operational flexibility, RideAware will outsource manufacturing to specialised wearable device manufacturers, primarily based in Asia (e.g. Shenzhen). This approach allows the company to scale production efficiently in line with demand while avoiding the high fixed costs associated with owning production facilities. Outsourcing also provides access to established expertise in AR hardware integration, sensor assembly, and precision manufacturing. By leveraging experienced partners, RideAware ensures consistent product quality while focusing internal resources on product innovation, software development, and user experience.

For storage of the product, RideAware intends to work with EU-based third-party logistics companies that would receive the product directly from the China-based manufacturing facility. This facility would be able to fill orders directly through RideAware's Shopify store. Additionally, the 3PL company would coordinate with physical retail stores when they require more inventory, as well as periodically ship products to Amazon fulfilment centres. This allows the company to avoid fixed costs for a warehouse. While also ensuring that demand across all of the EU can be met at reasonable shipping prices.

Distribution Model

RideAware adopts a hybrid distribution model combining direct-to-consumer (DTC) sales and selected retail partnerships. Online sales will be conducted through the RideAware website, planned to be hosted on Shopify. RideAware glasses will be shipped from third-party logistics (3PL) providers, located within the EU, to ensure efficient order fulfilment and prompt delivery. This approach allows for scalability while maintaining a high level of customer service. In addition, partnerships with bike shops will provide physical touchpoints for customers, offering services such as product fitting, calibration, and after-sales support. This improves the customer experience while increasing brand visibility within the cycling community.

8. Financial Projections

Key Assumptions

Income Sources

RideAware's primary income stream is derived from the sale of its primary product offering to everyday cyclist consumers as described above. In depth sales predictions are covered in the following sections, with the brand expecting to have unit sales in year one of approximately 2000 units and at an associated selling price of €194.

Salaries

To briefly mention, *salary related costs* are assumed to be negligible given the decision to reinvest profits in the business' early stages and equity compensation for software development. Once we become increasingly profitable, the leadership team will then distribute wages as they see accordingly.

Fixed Asset Investment and R&D

In order to launch RideAware's operations effectively, we assume a heavy capital expenditure specifically on assets such as manufacturing equipment, employee MacBooks and phones, as well as injection moulds for the product's frame. The cost of goods sold is €149, giving us approximately €45 of pure margin per unit sold. We also assume a consistent investment of €140,000 in R&D across years one, two and three to support rapid innovation and overall marketability.

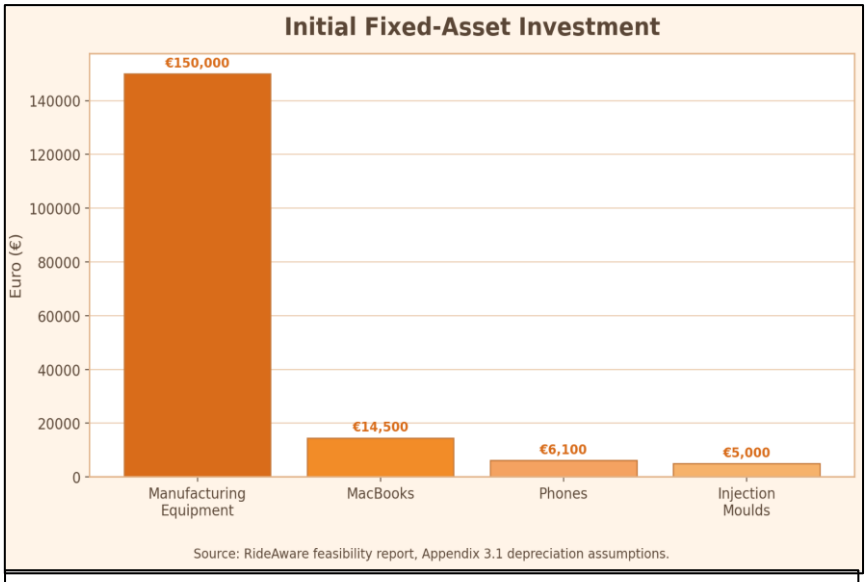


Figure 1.1: Fixed Asset Investment Summary

Depreciation and Amortisation

As illustrated in figure 1.2, we assume a straight-line method of depreciation and amortisation ranging from a useful life of five to ten years depending on the asset in question.

Overhead Costs

RideAware strategically assumes a largely remote work structure in its early stages to save on the extensive costs associated with a physical office location. Therefore, main overhead costs include warehouse rent at close to €20,000 per year, and utilities and insurance at nearly €2000 annually each.

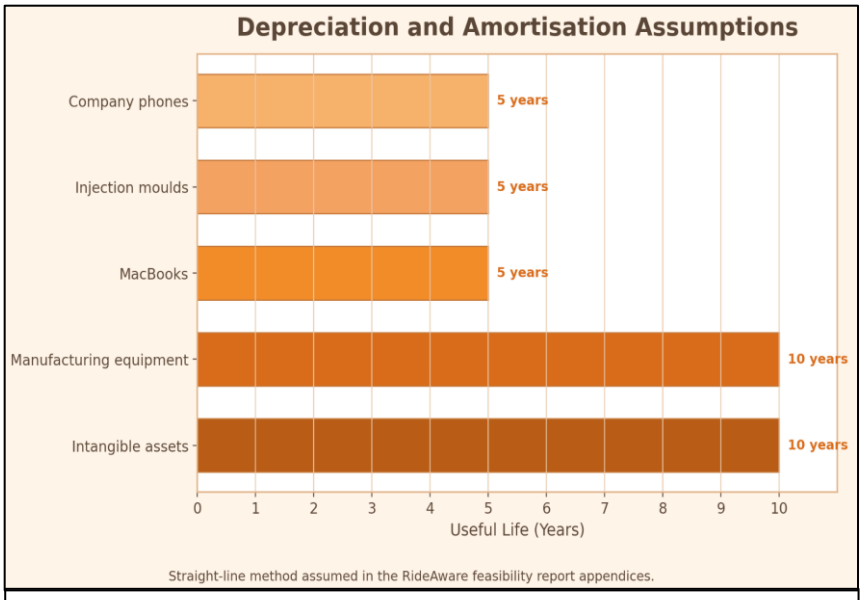

Figure 1.2: Summary of Depreciation and Amortisation Assumptions

8. Financial Projections

Income Statement

We assume a moderate growth trend to avoid overestimating the success of our product in its initial stages. This translates to Sales predictions in year one, two and three to be €388,000.00, €504,000.00, €655,720.00, respectively. Additionally, this translates to projected unit sales of 2000 in year one, 2600 in year two, and 3380 in year three with an effective annual growth rate assumed at 30% year over year. By the end of year three we expect a healthy EBITDA margin of approximately 19.53% which displays healthy operating profits for our firm.

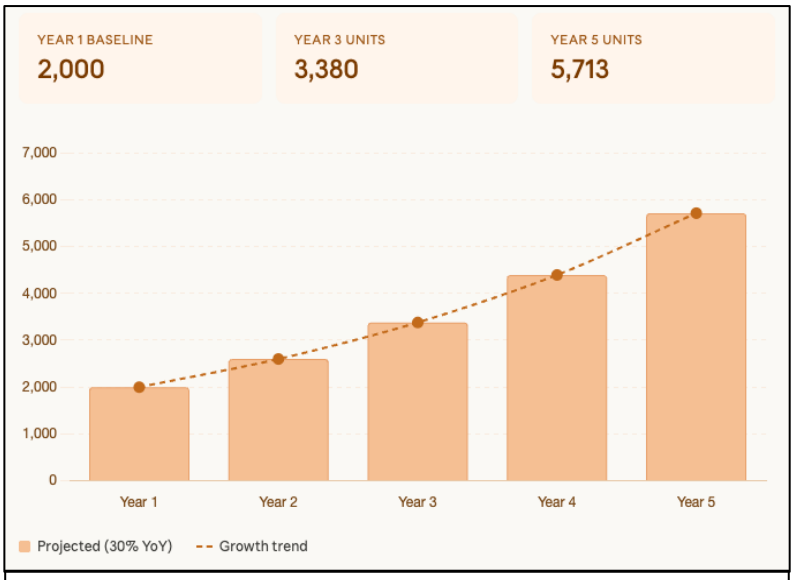

Figure 2: Projected YoY Unit Sales

Net Sales Year 1	Net Sales Year 2	Net Sales Year 3	Year 3 EBITDA Margin
€388K	€504K	€655K	19.53%

8. Financial Projections

RideAware
See Beyond

Balance Sheet(s)

Highlighting some key components of RideAware's sample balance sheet progression from FY2027 to FY2029, one sees a steady increase in R&D investment into prototypes and product updates. Given the nature of our product, being tech-focused, it is vital to maintain our technology as being innovative and future-focused. Consequently, heavy expenditures in R&D have the potential to rapidly deteriorate our cash balances moving into years two and three, which prompts further investment needs.

In terms of retained earnings, we expect a consistent increase from years one to three from approximately €12,000 to €82,000, all of which will be reinvested back into our operations and future capital expenditures to encourage long term growth and stability.

Table 3: Sample Balance Sheet(s) FY2027-FY2029

8. Financial Projections

Statement of Cashflows

Our Annual Statement of Cashflows tells a consistent narrative: heavy investment in product R&D yields negative cash flow balances in year two and three *(please see Table 3)*. Until RideAware gains further traction in the consumer space, we require a preliminary capital injection in order to maintain optimal balances of cash to meet our day-to-day operating needs. Although this seems alarming, it a typical and common observation in early-stage tech startups that encompass hardware components.

Table 4: Multi-Year Statement of Cashflows FY2027-FY2029

Scenario Analysis

To remain agile in our future business operations and have the ability to adapt to volatility in the larger macro-economic environment, it is useful to have contingencies based on projected scenarios. As observed in table 5.1, 5.2 and 5.3, RideAware is projected to break even in the base case climate at 1512, 1595, and 1906 units in FY2027, FY2028, FY2029, respectively. However, if fixed costs rise due to unforeseen circumstances, the firm predicts breaking even at 2268, 2392, and 2858 units respectively.

Therefore, if the firm experiences difficulties in cost control and reduced sales in the short-run due to a reduction in disposable income, for example, the firm must adapt quickly to avoid long-term financial harm.

For instance, if fixed costs skyrocket as displayed in the worst-case scenario, the firm should delay expenditures on non-essential costs in the short-run to conserve its cash balance. These may include line items such as non-essential marketing, and planned expansion projects. It is important to note that given the purposeful remote layout and Just-in-Time supply chain system adopted by RideAware, the firm benefits from naturally leaner operations which minimises cash flow risks in times of economic or political uncertainty.

RideAware Ltd. Break Even Analysis For the Year Ended 31 December 2027			
Projected Scenario:	***Base-Case***	***Best-Case***	***Worst-case***
Per Unit Selling Price (rounded)	€ 194.00	€ 194.00	€ 194.00

Table 5.3: Fixed-Cost Scenario Analysis FY2029

9. Sales Pipeline

Sales Pipeline

As shown in *figure 6* and *table 6,* the firms' sales pipeline is projected to be around €533,000 which is substantially higher than our corresponding sales forecast. It is important to highlight this discrepancy given the nature of some B2B and B2C sales being unattainable. That is, potential sales remain potential until they are closed and may therefore be higher or lower than the forecast figures. Regardless, RideAware strives to drive healthy sales numbers and establish significant leads with bike shops, online consumer sales, and pilot opportunities.

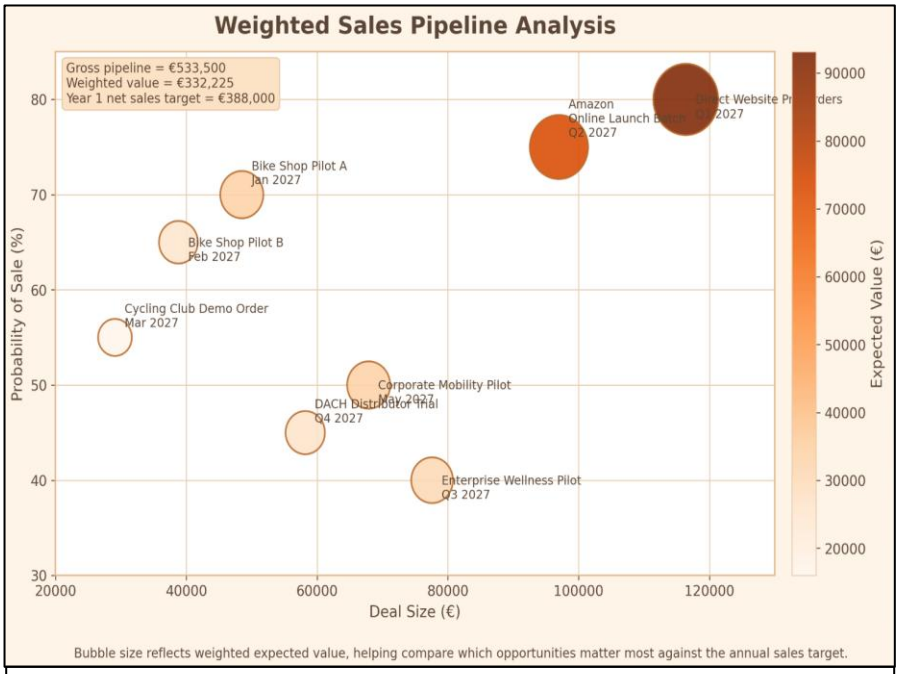

Figure 6: Sample Sales Pipeline Visual

RideAware Sales Pipeline

Illustrative Year 1 pipeline with gross value above forecast sales

Dublin Bike Shop Pilot A	€48,500	Jan 2027	70%	€33,950
Dublin Bike Shop Pilot B	€38,800	Feb 2027	65%	€25,220
Cycling Club Demo Order	€29,100	Mar 2027	55%	€16,005
Corporate Mobility Pilot	€67,900	May 2027	50%	€33,950
Amazon / Online Launch Batch	€97,000	Q2 2027	75%	€72,750
Direct Website Pre-Orders	€116,400	Q1 2027	80%	€93,120
DACH Distributor Trial	€58,200	Q4 2027	45%	€26,190
Enterprise Wellness Pilot	€77,600	Q3 2027	40%	€31,040

Table 6: Sample Sales Pipeline: B2C and B2B

10. Funding Requirements

Funding Split

Our Strategic funding split relies on two primary sources of investment. First off, personal funds which encompasses our own savings. We opted for a larger portion of personal funds use given our passion for the project and strategic reduction of future debt obligations. This is particularly useful in risk reduction in the short-term. In addition, the remaining €200,000 is derived from angel investors who will in turn be compensated with an equity stake in our firm.

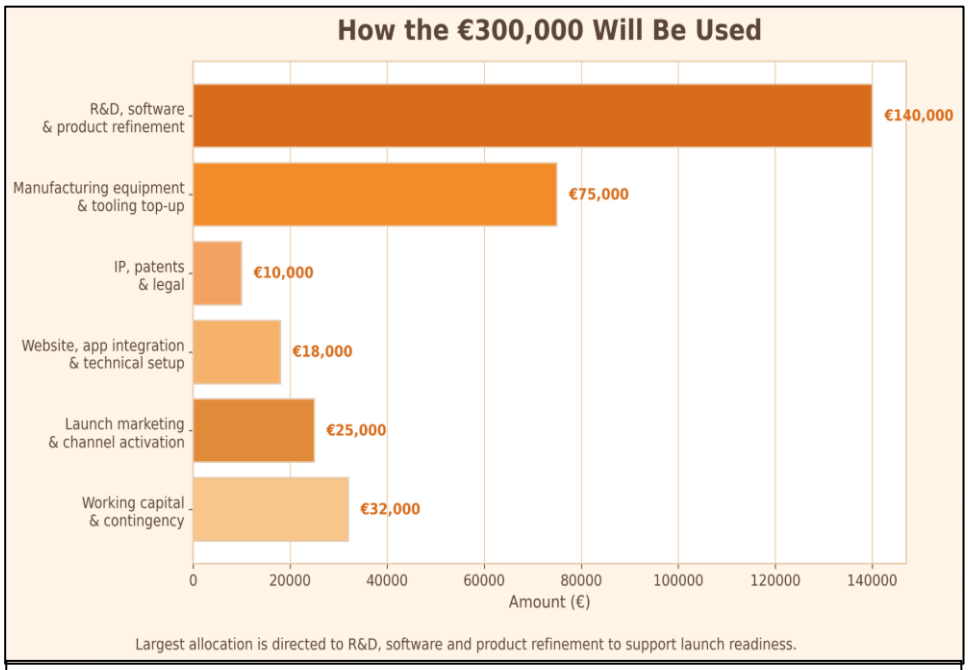

Figure 7.2: Funding Allocation

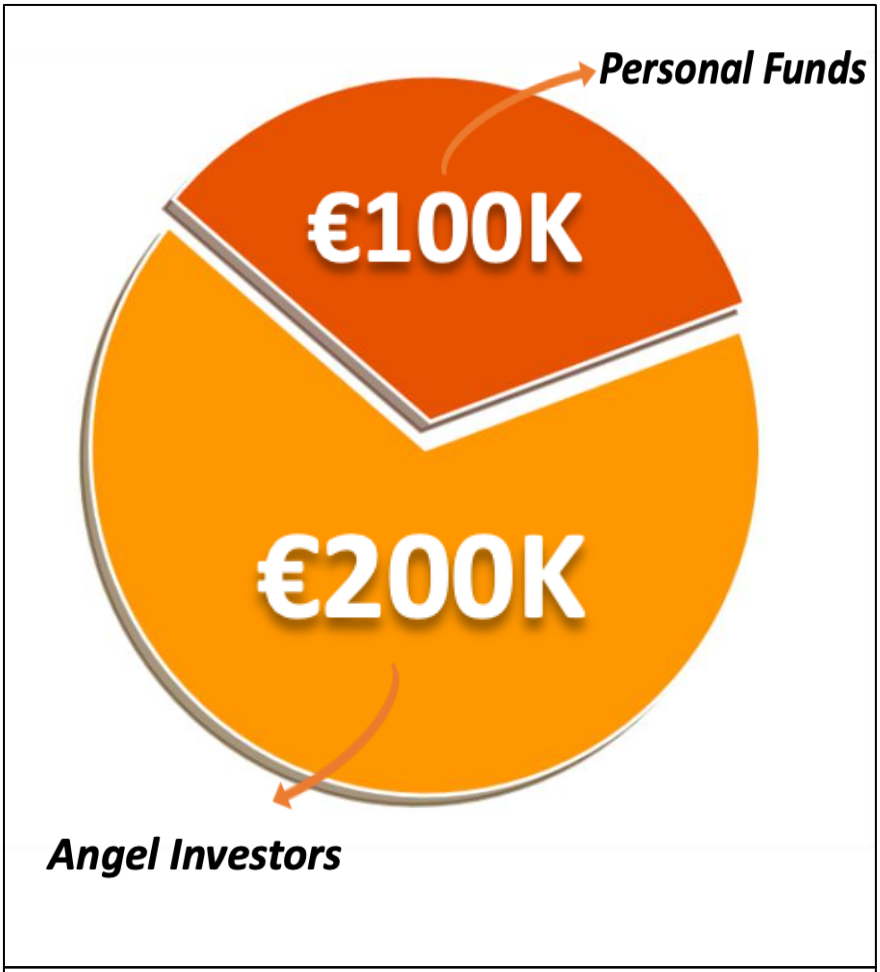

Figure 7.1: Funding Split

Funding Allocation

The €300,000 funding amount will be allocated across core business components that are essential for sustainable operations and future growth in our relative niche. The largest portion, €140,000, will be used for R&D and product refinement to ensure quality and innovation. Next, €75,000 will be put towards our manufacturing equipment expenditure to produce our physical product. Also, €10,000 will be allocated towards IP, patents and legal costs, and €18,000 towards the creation and design of our website which is one of our main sales channels. Finally, launch marketing and working capital contingencies account for the final portion of the total €300,000 funding amount.
